i < 'i, pcl (nominative). On the history of the nominative marker, see ka.

1. marks the subject of one or more following adjective or verb expressions.

1a. usually translated as the subject. ¶**San i noph.ta** The mountain is tall. **San i noph.ko alum-tapta** The mountain is tall and beautiful. **San i noph.ko mul i malk.ta** The mountains are tall and the waters are clear. **San i noph.ko mul i malk.un nala 'ta** It is a country where the mountains are tall and the waters are clear. **tāythong.lyeng i yēnsel ul hasilq sikan** the time when the President will make his address. **Son nim i osyess.ta** The guest has arrived. **Ku sālām i pang an ey tul.e wā se uyca ey anc.ess.ta** He came into the room and sat down on a chair. **ku sālām i anc.ess.tun uyca** the chair that he sat on. **Tangsin i positun sinmun i ce kes i ani 'p.nikka** Isn't that the newspaper you were looking at over there? **Ku sōk ey mues i iss.nun ya** What is inside it? **Hyeng nim i cikum mues ul hasey yo** What is your brother doing now? **Ku kes i ippuci man pissaci** That one is nice looking but I bet it's expensive. **Ku haksayng i caki apeci hanthey phyēnci lul ssukeyss.ta ko hayss.^sup.nita** The student said he would write a letter to his father (or: It is said that the student will ...).

1b. literally translatable as a subject, but freely translated as the object – of possession, ability, evaluation, or emotional affect. The person who possesses, is able, evaluates, or feels the emotion is also marked with the nominative particle. ¶**tōn i ēps.ta** there is no money, money is lacking/wanting = has no money, lacks/wants money. **chayk i mānh.ta** "books are many", there are lots of books = has lots of books. **caynung i iss.ta** there exists talent = has talent, is talented. **mas i iss.ta** there is flavor = has flavor, is flavorful/tasty/good, tastes good. **son i aphuta** one's hand is sore = one has a sore hand. **pelus i napputa** one's habits are bad = has bad habits.

kkoch i cōh.ta (1) flowers are good = (this plot / garden / place / ...) has nice flowers; (2) "flowers are liked" = I like flowers. **maywun ūmsik i silh.ta** "spicy food is disliked" = I dislike spicy food. **Ku kes i poko siph.ta** like to see that. **Tal i poinun ya** "Is the moon visible?" = Can you see the moon?

1c. marks the subject of a phrase as the possessor or as the person who is able, who evaluates, or who feels the emotion. The phrase can include a more immediate/direct subject for the verb or adj, expressing what is possessed or the target of the ability, the evaluation, or the emotion (1b). ¶**Tangsin i tōn i iss.e yo?** Have you got any money? **I tose-kwan i chayk i mānh.ta** This library has a lot of books. **Namphyen i pelus i napputa** The husband has bad habits. **I kes i kaps i te ssata** This one is cheaper (in price). **Ku ilq-kwun i him i mānh.ta** That workman is strong. **Wuli ka pāym i musepta** We are afraid of snakes. [NGWANG] 'i 'icey ['SWUK-"PWU] y [CWON] 'ho'sitwo'ta (1481 Twusi 8:10b) the king is now respectful of his uncle.

2. 2a. marks the subject of an affirmative copula phrase, which is often the Identified. The complement, often the Identifier, is marked only by the copula. ¶**I kes i mues inya** What is this? **Cikum i hak.kyo kalq sikan in ya?** Is THIS any time to be going off to school?

2b. marks the complement (as well as the subject) of a negative copular phrase. ¶**I kes i nay kes i ani 'n ya?** Isn't this one mine? **Ku sālām i haksayng i ani 'ko, chayk cangsa (i)ci** He isn't a student, he's a bookseller.

But the particle may drop: **Kulem cēng-mal ani 'ko [mālko]!** Yes, of course it's untrue! **cham in ci ani 'n ci ālta / mūt.ta** knows / asks whether it is true or not. **Onul ku sālām ani 'tumyen wuli phyen i cilq pen hayss.ci?! – Kuleki ey māl ici!** I bet our team would nearly have lost today if it hadn't been for him. – You're absolutely right, I agree. **On kes un talum ani 'la pūthak halq kes i hana iss.e wass.ta** I have come for no other reason than just to ask a favor of you. **Cil iya etteh.tun (ci) kaps ila to ssa ya halq kes ani yo** Regardless of the quality, [isn't it the case that =] surely the price should be kept low. In some cases the

noun is ellipted along with the particle: *Ku kes i cēng-mal in ci ani 'n ci ku ka mul.ess.ta* He asked if that was true or not.

Expressions with ... (-)cek '-ic' (and other precopular nouns, which likewise normally do not function as a subject or an object) take the nominative marker: *kwahak-cek i ani 'ta* is not scientific (in attitude).

When the focus particles or delimiters are attached, the *i/ka* is normally suppressed: *Ku kes un kaykwuli to ani 'ko olchayngi to ani 'ta* That is neither a frog nor a tadpole. *Hak to pōng to ani 'ta = Cwuk to pap to ani 'ta* "is neither fish nor fowl" = *I man han sōnhay nun āmu kes to ani 'ta* Such a small loss is nothing to me. *Ku sālām ccum uy caysan un āmu kes to ani 'ta* The property HE has is nothing. *Twū sālām i 'ihon halq cikyeng ey ilun kes un ani 'ey yo* (Im Hopin 1987:34) The two have not reached the point of planning to divorce. *I kes un kwahak-ca eykey man kwan.lyen toyn mūncey nun ani 'ta* This is not a problem that concerns scientists only. *Na eykey man chayk.im i iss.nun ke n' ani 'ta* I am not the only one who is responsible. *SEE ... kes (i) ani 'n ya, talum ani 'ko/'la, yekan ani 'ta.*

Middle Korean examples of copula negation:

With the particle *'i*: ... *'honwon "ma'l on sa'la na'ta 'honwon "ma'l i a'ni 'la* (1447 Sek 6:36a) saying that ... is not to say they are born alive. *KON 'oy "nin ke's i a'ni 'Gen ma'lon* (1462 ¹Nung 2:81b) it is not that a root arose, but ... *... QWUY-KWANG 'oy NUNG 'hi pi'chwuywo'm i a'ni 'la 'ka* (1463 Pep 3: 104b) it is not the full illumination of the mighty light ..., yet ... *CIN-'SSILQ s PPWO-'SALQ 'oy 'TTYWU 'hwol 'kwo.t i a'ni 'n i 'la* (1482 Kum-sam 3:34b) it is not a place where a real bodhisattva would dwell.

Without the particle *'i*: *"sa'lo.m in 'ka "sa'lom a'ni 'n 'ka 'ho'ya NGUY-SIM toWoy'n i* (1459 Wel 1:15a) grew suspicious whether it was a human being or not. *'tye non hwo'za "salom a'ni 'ka* (1475 Nay 2:1:16a) isn't he a person alone? *'TI-"THYey "twul[h] a'ni 'm ye "KYENG 'two "twul[h] a'ni 'n i; 'TI "twul[h] a'ni 'lwo'm on 'TI-'HHYWEY 'lwo'toy ...* (1459 Wel 8:31b) wisdom and substance are not two things, nor is the object of wisdom two; that

wisdom is not two things is [a matter of] knowledge and discernment [together] and ... *'homol'mye TUNG a'ni 'm ye "pwom a'ni 'la PWUN-'PYELQ hwo'm isto'n ye* (1462 ¹Nung 2:84a) with no light, with no sight, how can one distinguish?! *'i MYENG 'uy 'MANG 'on nyenu a'ni 'la 'KAK-MYENG 'i he'mu'l i towoy'n i* (1462 ¹Nung 4:23b) the extravagance of this light is nothing but an error in the enlightenment.

Omitting *'i* is particularly common after a Chinese word: *'i 'SYWELQ-'PEP ka, 'i 'SYWELQ-'PEP a'ni 'Ga* (1482 Kum-sam 4:37b) is this preaching the law or isn't this preaching the law? *'PEP-HHWA 'ay s "KWA-'KUY a'ni 'n 'ka 'honwo'la* (1462 ¹Nung 1:17b) I ask whether it is not the testimonial to phala ([cause and] effect) that is in the Lotus [sūtra]. *'SYANG 'i 'kwot 'SYANG a'ni 'la 'za CIN i towoyno'n i 'la* (1482 Kum-sam 3:12a) just when appearance is not appearance it becomes reality. *'TI-"THYey "twul[h] a'ni 'm ye "KYENG 'two "twul[h] a'ni 'n i; 'TI "twul[h] a'ni 'lwo'm on 'TI-'HHYWEY 'lwo'toy ...* (1459 Wel 8:31b) wisdom and substance are not two things, nor is the object of wisdom two; that wisdom is not two things is [a matter of] knowledge and discernment [together] and ... *'homol'mye TUNG a'ni 'm ye "pwom a'ni 'la PWUN-'PYELQ hwo'm isto'n ye* (1462 ¹Nung 2:84a) with no light, with no sight, how can one distinguish?! *MA a'ni 'la mu'su ke's i'l ywo* (1462 ¹Nung 9:101b) it is not a demon but what is it?

But there are also examples of Chinese noun + *'i* (or its reduction *y*): *CYE-'PPWULQ 'ul 'pwo'zowo'm i "cye'kun YWEN 'i a'ni 'lwo'swo-ngi 'ta* (1463 Pep 1:88b) seeing the Buddhas is indeed no small contributing cause. *pen'tu'ki 'PEP-HHWA y a'ni 'Ge'nul 'za ...* (1462 ¹Nung 1:17a) though they cannot be the Lotus sūtra exactly, ...

When a particle such as *'kwos* 'precisely, just' or *'pwun* 'only, just' is applied to the complement, the particle *'i* is obligatorily suppressed: *'MILQ-'QIN 'kwos a'ni 'm ye n'* (1462 ¹Nung 1:8b) if they are not secret causes. *wos.kwos hon kes "pwun a'ni 'la* (1447 Sek 13:39a) not just fragrant things, but ...

In the normal MK negativizations *V-'ti a'ni / "mwot 'ho-*, the suspensive ending derives

from the postmodifier *t* + nominative *i*; much less commonly there is found also *V-t ol a'ni* 'mwot *ho-*, with the accusative marker. The modern *V-ci anh-* (*mōs ha-*) comes from the MK *V-ti* but permits further marking by either the accusative (*V-ci lul*) or nominative (*V-ci ka*) to impart lively emphasis.

3. marks the complement of a change of state: into, into being) so as to be ... (CF *ulo*). ¶*pam i toymyen* when it becomes (gets to be) evening; by evening. *Mul i ēlmyen el.um i toynta* When water freezes, it turns (in)to ice. *Sensayng i toye la* Become (Turn yourself into) a teacher!

But sometimes the particle drops: *Sālam toyko ani toynun kes un ney nolyek ey tallyess.ta* It depends upon your own endeavor whether you become a success or a failure. *"cywong towoy 'Ge ci'la 'hono'ta* (1481 Twusi 8:1b) he says that he wants to become a slave. *no'm oy 'kye'cip towoy'nwo'n i chol hi 'tye kwo'ma towoy 'Ga ci'la* (1463 Pep 2:28b) I would rather become his concubine than another man's wife.

4. 4a. marks a phrase (ending mod + *kes*) that expresses the fact on which a following inference of likelihood is drawn: so (likely), and (probably). CF *-un/-nun tey*. ¶*Pal-mok i tāytan hi puun kes i ama pule cin mo.yang ita* His ankle is badly swollen; (and) I think it's broken. *Ay tul i cip an ey ēps.nun kes i ama pakkath ey se nōlko iss.na pota* The children aren't in the house; (so) they must be playing outdoors.

4b. (*kes i* = *kes ul*) but; although; yet. ¶*Ilenq il i iss.ulq ka pwā se ilccik-i onta ko han kes i (nemu pappe se mōs wass.ta)* I was afraid that this kind of thing would happen, so I meant to come earlier, but CF *-ta ka*.

5. In Middle Korean *i* marks a substantive nominalization *V-('Uo)m* as the complement of a negative auxiliary expression. (We would expect the accusative marker.) ¶*kan tay 'lwo 'salom sim'kywu'm i 'mwot ho.l i 'n i* (1463 Pep 4:86b) cannot let people have it [= the sūtra] just at random. ... *kalo'chiti a'ni 'hwo.m i 'mwot ho'l i 'la* (1475 Nay se:6a) cannot help but point out (that) *'sa'lo'm uy a'lomtye s 'ywu'mwu 'lul ye'ze pwo'm i a'ni 'hwo'l 't i.n i 'la* (1518 Sohak-cho 8:22a) one is not to peek at other people's private letters.

6. MK *i* sometimes marks the underlying object of a verb of knowing, whether negative (which could be treated as an extension of 5) or affirmative. SEE *-un 't i 2* and compare *-un 't ol*. Structures with the postmodifier *i* that occur as unmarked objects might (in some cases) have absorbed the nominative particle: *SSYA 'two isi'm ye 'CYENG 'two is.no'n i a'lwo'm i NGUY khe'ta* (?1468- Mong 39a) 'it is well to know that both wrong and right exist'; *'SYA-'NGWUY 'KWUYK 'ey hon 'TTAY-SSIN SYWU-'TTALQ 'i'la 'hwo'l i is.no'n i 'alo'sino'n i 'ngi s 'ka* (1447 Sek 6:14-5) if that is taken as a postappositional epithematization 'do you know a minister by the name of Sudatta who is in the state of Śrāvasti?' rather than the more loosely knit 'there is a minister in the state of Śrāvasti who is named Sudatta; do you know him?' which is what I think was intended.

7. Middle Korean *i* uncommonly marks the underlying subject of a causativized intransitive verb (which normally is converted to accusative or dative). ¶*pas'k uy s 'mal-so'm i MWON an'h ay 'tuli'ti 'mal'm ye* (1475 Nay 1:4b) letting no outside words enter the gate.

8. MK *i* marks a complement of similarity, where modern Korean uses *kwa* (or *hako*). ¶*'CHYWULQ-KA hon 'salo'm on sywo'h i 'kot.ti a'ni ho'n i* (1447 Sek 6:22a) the person who has become a monk is not like the common man. *CYE-PPWULQ nilu'sinwon 'ma'l on 'NAY-CYWUNG 'nay tal'Gwolq 'cwu'l i 'ep'susi'n i 'ngi 'ta* (1447 Sek 9:27a) there is no way that the words said by the various Buddhas will differ in the end.

NOTE 1: In modern standard Korean this particle occurs only after a consonant; after a vowel it is replaced by *ka*. But in the literary language, and widely in dialects (especially of the north), *i* is not infrequent after a vowel, particularly in certain set phrases such as *ka i ēps.ta* (= *ka ka ēps.ta*) 'is without limit, is boundless' and *hana i toyta* = *hana ka toyta* 'becomes one, unites' (perhaps influenced by the elided consonant of earlier *honah*, CF 1936 Roth 40). SEE *key* (= *kes i*, *ke ka*), *nay (ka)*, *ney (ka)*, *cey (ka)*; *pay* (< *pa i*).

NOTE 2: After a vowel other than *i* or *y*, the MK particle *i* was reduced to *y* and attached to the preceding vowel to produce a diphthong:

'na 'i 'I' → 'na y (1447 Sek 6:4a), 'pye 'i 'rice plant' → 'pye y, 'sywo 'i 'ox' → 'sywo y (1459 Wel 1:24b), e'nu 'i 'which one' → e'nu y (1482 Nam 1:14a), 'nwu 'i 'who' → 'nwu y (1445 ¹Yong 15, 99), ke'wu(')lwu 'i 'mirror' → ke'wu'lwu y (1481 Twusi 21:35b). If the preceding syllable was low-pitched the accent of the resulting diphthong was the blend of low + high = the rise that is marked by the double dot: ne 'i → "ne y (1447 Sek 6:1a), pwuthye 'i 'Buddha' → pwu"thye y (1447 Sek 6:1a), ku 'that one' → "ku y (1447 Sek 19:16a). After -i or -y, the particle was further reduced to zero with no accentual trace when the last syllable of the noun was high-pitched: me'li [i] (1447 Sek 13:7b) 'head', 'poy [i] (1445 ¹Yong 20) 'boat'. After a low-pitched syllable the high pitch of the particle was retained and blended with the low pitch of the last syllable of the noun to make the rising accent: -i [i] = "i, -y [i] = "y: toli 'bridge' → to"li (1481 Twusi 25:7a), 'poy 'pear' → "poy (1481 Twusi 20:9b), 'kwolay 'whale' → kwo"lay (1481 Twusi 25:53a), 'motoy 'node' → mo"toy (1481 Twusi 25:2b), 'nwuwuy 'older sister' → nwu"uwuy (1475 Nay 3:46a), ne-huy → ne-huy (1447 Sek 13:47b; 1459 Wel 2:26b, 21:68b) — CF the genitive-marked subject of ne-huy 'uy elwu 'NGWAN-HWOW 'hwolkke'si (= 'hwolkkes 'i) (1463 Pep 2:66-7) 'the things you folks are rather fond of'. But often the free-standing Hankul y was written after a Chinese character representing a syllable -i or -y (CF He Wung 338-9), just as it was written after syllables ending in other vowels where it was actually pronounced. And the subject could be left unmarked by 'i to begin with, as in the obvious case of 'mwom 'khu'kwo tali 'khu'kwo 'its head was large and its legs were large' and the less obvious 'mwo'm i ko'cang 'khu'kwo tali "kwulk'kwo (1447 Sek 6:32b) 'its head was extremely large and its legs were thick'; in both examples, we would expect ta"li if a trace of the particle were present. When a high-pitched -i or -y is the subject, we have no way to know whether the particle was absorbed without a trace or was never attached in the first place.

NOTE 3: All of the remarks in Note 2 apply also to the copula -i-, which reduces to -y-

in exactly the same way: 'na 'I/me' → 'na 'y'la (1459 Wel se:4b), 'kye 'chaff' → 'kye 'y'la (1463 Pep 1:195b), yang'co 'appearance' → yang'co 'y'n i (1459 Wel 1:16b), 'nwu 'who' → 'nwu 'yGe'n ywo (?1468- Mong 22b), 'sywo 'ox' → 'sywo 'yn 't ol (1482 Kum-sam 2:3a); ku 'that one' → "ku 'y'Gwo (1447 Sek 13:36b), 'phunglywu 'music' → 'phwung"lywu 'y'n i (1447 Sek 13:9a), ne 'you' → "ne 'y'm ye (1459 Wel 8:5b), 'mwoncye 'ahead' → 'mwon"cye 'ylwo'ta (1481 Twusi 20:6b), 'pwuthye 'Buddha' → 'pwu"thye 'ysi'n i 'la (1447 Sek se:1a). Accent unexplained: "amwo 'anyone' → "amwo 'y'na (1447 Sek 9:17a, 21a) rather than the expected *"a"mwo 'y'na, and → "a"mwo 'yGe'na (1459 Wel 1:13a) rather than *"a"mwo 'yGe'na.

Like the particle, the copula stem vanishes after -i or -y: ka'hi 'dog' → ka'hi 'la (1459 Wel 21:42b), 'pwul'hwuy 'root' → 'pwul'hwuy 'la (1459 Wel se:21a), 'kulu'mey 'shadow' → 'kulu'mey 'la (1447 Sek 19:37a), 'HHWONG 'on 'swu[h] 'muci'key 'Gwo i 'Yey 'non 'am 'muci'key 'la (1462 ¹Nung 2:87b) [the Chinese word] HHWO is the brighter of a double rainbow, and Yey is the paler.

Like the particle, too, when attached to a low-pitched syllable, the copula stem leaves behind an accentual trace before vanishing: toli 'bridge' → to"li 'la (1459 Wel 21:77a); 'nwuwuy 'big sister' → nwu"uy 'la (1459 Wel 21:162a); 'motoy 'node' → mo"toy 'n i (1459 Wel 10:118a), mo"toy 'n i 'la (?1468- Mong 43b).

These remarks also apply to 'i + other particles such as 'za: 'nwu y 'za NUNG 'hi 'TWOY-TAP ho'l [i] 'ye'n ywo 'hosi'kwo (1447 Sek 13:15a) he said, "Just who will respond fully?", and ...

-i. Many nouns incorporated **-i** (after a vowel, reduced to **-y**) at various times in different dialects, including modern Seoul. The **-i** was either the noun **i** 'one = person/thing, fact' or the nominative particle; the resulting forms behave like any other noun and can be followed by the case particles **i/ka** and **ul/lul**. Often the shorter original form is found in other dialects or in MK texts.

These cases could be considered as having absorbed the ending, or as formed with a zero (= with no) ending. We might also wish to consider the following cases as zero-ending derived nouns: **kamul** drought < **kamulta** goes without rain, ? **mak** the last < **mak**- put an end to (or perhaps an abbr < **macimak**), **phum** bosom (space between chest

and clothes) < **phum.ta** carries in the bosom (CF §3.1); **pis** comb < **pis.ta** combs, **ppyēm** span < **ppyēm.ta** measures by the span, **sin** footwear < **sin.ta** wears on the feet. But we could instead derive the verbs from the nouns; there are few clues to the histories. See also the irregular derived nouns that end in -y and -ey.

NOTE 2: In set phrases V-i + (lul) **hata** = the verb: **mamuli hata** = **mamuluta** finishes up, **nah.i hata** = **nah.ta** weaves, **pun-phuli lul hata** = **pun-phuluta** vents one's anger (CF -um), **sal cap.i hata** = **sal cap.ta** props it up, **tacap.i hata** = **tacapta** supervises strictly.

NOTE 3: In the 1600s -i lost its productivity in favor of -'ki (Katsuki 1968).

2. derives a noun from a mimetic adverb (or a bound element).

NOTE 1: A few derived adverbs are the same as the stem: nayli 'down' < naylita 'descends', teti 'slowly' < tetita 'is slow'. And olay 'long, for a long time' is the same as both the stem and the infinitive of the adjective olay- 'long, longstanding'.

NOTE 2: The derived adverb often carries a more abstract meaning than the adverbative, so that kiph.key phass.ta 'I dug it deep' refers to the result of the action, while kiph.i sayngkak hayss.ta 'I thought about it deeply (in depth)' refers to manner or intensity.

5. vacuously attached to an adverb: tewuk(-i) all the more, particularly. ilccik(-i) early ? < ilta + -cek.

ita < **i'ta* (→ *i'la*), copula; after vowel **'ta** but MK **y'ta* (→ *y'la* but *'la* after *i* or *y* only). VAR **ilota** < *'ilwo'ta*. SEE **ियो** (= **iko**), **ila** (= **ita**, **ie**, ...), **ia** (= **ie**). CF *'i/lj'ta*, *?ilta*.

1. cop indic assert. it is/equals, it is a case (an instance) of, it is a matter of. **A ka X ita** A is X. **X ita** It is X; It is a matter of X. **A ka B ka ani 'ta** A is not B. **B ka ani 'ta** It is not B; It is not a matter of B.

NOTE: Ordinarily the copula form must be preceded by something (typically a noun) to which it is attached without pause. After a vowel the stem **i-** is usually reduced to **y-** when an ending with a vowel is attached (**i-e** → **ye**) and omitted with a consonant is attached (**i-ta** → **'ta**); the shortened forms are usual in speech and common in written sentences, too. (But monosyllabic forms such as **im**, **in**, **il(q)** often emerge intact.) That shortening makes many copula forms identical with forms abbreviated from **hata**, though the abbreviated forms were usually distinct in MK, where the copula was reduced no further than a glide **y-** except after *i* and *y* where that would create an unacceptable string requiring further reduction of the glide

to nothing. For clarity, it is often wise to write the unabbreviated forms of **hata** and **ita**. Many of the inflected forms of the copula are treated quite often as quasi-particles. For more on the negative copula, see **ani**, **i** (pcl) 3. On using or not using an apostrophe to mark the reduced forms of the copula, see **ie** (note).

2. transference. it is ... and then (something changes). **¶Etten ttay pomyen nolan sayk ita (ka) etten ttay pomyen huyn sayk ita** Some times it looks to be yellow and other times it looks to be white. **Etten ttay n' waysik ita (ka) etten ttay n' yangsik ita (ka) kuleci yo** (What we do is) sometimes we have Japanese food and sometimes we have western food.

3. (= **ita ka**) quasi-pcl (cop transference):

3a. used after particles to show a shift of location or of purpose. **¶Köl-pang ey 'ta (ka) kel.ess.ta** He hung it in the closet. **Sang wi ey 'ta (ka) noh.ass.ta** He put it upon the table. **Congi ey 'ta (ka) ssusey yo** Write it on the paper. **Yeki 'ta tochang ul chisipsio** Stamp your seal here. **I kes ul tā mues ey 'ta ssun' ya** (= **ssunun ya**) What do you use all these things for?

3b. inserted between infinitive (**-e**) and a verb of giving, to emphasize the shift in benefit of the favor reported. There is an interval of space involved between the "doing" and the "favoring", so that the one doing the favor has to "bring" the object that is involved. **¶chayk ul pillye 'ta cwuta** does someone the favor of lending him some books. **Sinmun ul sa 'ta cwusey yo** Buy me a newspaper. **Sensayng nim kkey Hānkuk ūmsik ul ma(y)ntul.e 'ta tulikeyss.^sup.nita** I will make you some Korean food, sir. **Latio lul kochye 'ta tao** Get the radio fixed. 3d. (miscellaneous, after inf) **tte 'ta mīlta**

pushes aside; shifts (blame) onto another. **phyo lul sa 'ta noh.ta** gets the tickets bought. **pat.e 'ta phalta** sells at retail.

3e. emphasizes the particles **ey**, **eykey**, **hanthey**, **ulo (sse)**. **¶Nwukwu hanthey/eykey 'ta ilen māl ul hay** Just who do you think you're talking to? / Just who(m) can I tell this to? SEE **-ey 'ta**, **ulo 'ta**.

3f. (miscellaneous) **keki (ey) 'ta** on top of that, in addition, what's more.

NOTE: For a different interpretation of 3, as a shortening of **tak.a** inf of **(*)tak-** = **taku-** ('approach') see Choy Hyenpay, Hankul 127:7-27 (1960). I believe Ramstedt (1939:98, 156) was the first to treat **(-e) 'ta ka** as the copula transference. For a still different approach, taking both **ta** and **ka** as particles, see Hong Yunphyo 1975, who offers us examples of the precursor of **ey 'ta** from 1489 Kup-kan 6:8 [a text unavailable to me] and 1608 Thaysan 36b (*kasom ay ta thi.m ye n* 'if one hits on the chest' [*ka-som-ay*]) and of **ey 'ta ka** from 1632 Twusi cwung-kan 25:27b (*na lol pwonayya ney kof.z*) *ay ta ka twu.l 'ye.n ywo* 'would it send me to the shore where you are?'); also of **ulo 'ta ka** from 1677 Pak-cwung 1:20 (*kulkey lwo ta ka kulk-pis.ki lul KEN-CENG hi hwotwoy* 'tidied up the smoothing nicely by applying a carpenter's plane'), and later from 1797 Olyun 3:11b. But, for Hong's argument the telling examples are those of *lol ta 'ka*, twice used to translate the Chinese accusative preposition *bā* in ?1517- Pak: (1:57a) *'a'ki 'lul ta 'ka 'stwo meli kas'kwo* (= *kask-'kwo*) 'tossures the child again and'; (1:56a) *'a'ki 'lul ta 'ka tol'kwo'ci 'yey yes.no'n i 'la* (= *ye[n]c.no'n i [i]'la*) 'puts the child up onto the wagon'. A serious problem for our explanation of (3): why was the MK version *-e 'ta 'ka* rather than **-e 'yta 'ka* or **-e 'yla 'ka*? There is a somewhat similar problem with explaining *-e 'la*. Also, there is an accentual anomaly (§2.12.4, p. 77).

ka < 'ka, infinitive < kata < 'ka'ta.

ka < 'ka, bound noun. (MK lenites to 'Ga after *l*, *y*, and often *i*.)

1. postmod = *ya* (question). SEE -un/-nun/-tun/-ulq ~. SYN *ko*, *i*, *a*. NOTE: In South Kyongsang attached directly to noun, omitting cop mod (Mkk 1960:3:35): *N ka* = *N in ka*. That is also a very common option for Middle Korean. In Phyeŋgan (Kim Yengpay 1984:98) *ka* is attached directly to a vowel-final noun and a consonant-final noun attaches *ika* (? = *i ka* pcl + postmod, or ? = *i-ka* cop stem + postmod): *I key ney chayk ika*? 'Is this your book?'; *Teki poinun key ne ney hak.kyo ka*? 'Is what can be seen over there your school?'

'i 'non "SYANG 'ka 'PPELQ *Ga* (?1468- Mong 53b) is this a reward or a punishment? (The omission was not obligatory; see 'in 'ka, a'ni 'n 'ka.)

MK examples with a genitive *s* substituting for the omitted copula modifier include -*ngi s* 'ka (polite question), -*n i s* 'ka (question), ... (see 4), and these are the source of the modern forms in 3.

2. postnoun. *ki(ye)n ka mi(ye)n ka hata* = *kiyen miyen hata* is uncertain (whether or not). CF 1 (NOTE).

ka, pcl. Only after a vowel; *i* is used after a consonant and occasionally (earlier always) after a vowel, too – see note under *i*.

1. marks the subject of one or more following verb or adjective phrases.

1a. usually translated as the subject. ¶ *Pata ka kiph.ta* The sea is deep. *Pata ka kiph.ko mulq koki ka mǎnh.ta* The sea is deep and the fish are plentiful. *pata ka kiph.ko mulq koki ka mǎnh.un kos* a place where the sea is deep and the fish are plentiful. *Nwu ka wass.nun ya* Who has arrived? *Eti ka cōh.un ya* Where would be a good spot? *Pi ka onta* (Rain comes =) It rains (or is raining). *Apeci ka osye se tōn ul cwusyess.ta* Father came and gave me some money. *apeci ka cwusin tōn* the money that father gave me. *An ey nwu ka iss.nun ya* Who is inside? *Ku catong-cha ka cōh.ci man pissaci* That car is nice but I bet it costs a lot. *Emeni ka cang pole kalye 'nta ko hayss.ta* Mother said she was going to the store. (or: Someone said Mother was going to the store). *ku kyōswu ka kānguy lul hasil ttay* when the professor delivers/delivered his lecture.

1b. literally translatable as a subject, but freely translated as the object – of possession, of ability, of evaluation, or of emotional affect. The person who possesses, is able, evaluates, or feels the emotion is marked with the nominative particle, too (1c). ¶ *phyo ka ēps.ta* a ticket is lacking, there is no ticket = lacks a ticket, has no ticket. *kyōswu ka cēkta* the professors are few (in number), there are few professors = has few professors. *ūymi ka iss.ta* there is meaning, a meaning exists = has (a) meaning. *meli ka aphuta* one's head aches = has a

headache. *Yenghwa ka cōh.ta* (1) movies are good = has good movies; (2) movies are liked = I like the movies. *hak.kyo ka napputa* the schools are bad = has poor schools; the schools are at fault. *kongpu haki ka silh.ta* studying is displeasing = I dislike studying. *Capci ka poku siph.ta* I'd like to see the magazine. *Pata ka poinun ya* Is the sea to be seen (= visible)?; Can you see the sea?

1c. marks the subject of a phrase as the possessor or as the person who is able, who evaluates, or who feels the emotion. The phrase can include a more immediate/direct subject for the predicate (verb or adjective), expressing what is possessed or what is the target of the ability, of the evaluation, or of the emotion (1b). ¶ *Ce ai ka khi ka te khuta* That boy is taller. *Nay ka meli ka aphuta* I have got a headache. *Nay ka kāy ka musepta* I am afraid of dogs. *I hak.kyo ka kyōswu ka cēkta* This school has few professors.

2. 2a. marks the subject of an affirmative copula phrase, and that is often the Identified. The complement, which is often the Identifier, is unmarked except by the copula itself. ¶ *Ku i ka nwukwu (i)n ya* Who is he?

2b. marks the complement (as well as the subject) of a negative copular phrase. ¶ *Nay ka cak.ka ka ani 'la, hwāka (i)ta* I am not a writer, I'm a painter. *I moca ka nay moca ka ani 'lokwn* Why, this (hat) isn't my hat!

But sometimes the particle drops: *Ani i key Swun-i emeni ani 'la ko!* – *cham olay kan man ip.nita* Why, it can't be Swun-i's mother, what a surprise, how long it's been since I've seen you! *Ne ani 'la to ku il ul halq sālām i iss.ta* There are people besides you who can do the job.

3. marks the complement of a change of state, into (being), so as to be. CF *ulo*; SEE *ita ka, ey 'ta ka*. ¶ *phyēy ka toymyen* if it's going to be any trouble. *Wuli chinkwu ka ku hwū cengchi-ka ka tōyss.ta* Our friend later turned into (became) a politician.

But sometimes the particle drops (SEE i): *pwuthye towoylq 't ol 'all i 'la* (1462 ¹Nung 7:26a) knows that he will become a Buddha.

4. and, but; emphasis. SEE *-ta ka*; *-ci ka*, *-ko ka*, *-key ka* (toynta); *ey ka* (NOTE). CF i 5a-b.

NOTE: The history of this case particle is controversial. In early texts there are very few examples that could be nominatives, and the earliest four are after *-y*: *QILQ-CHYEY 'ka* (1463 Pep 1:120b) 'all', *'ne y 'ka* (1459 Wel 18:71b) 'you', *poy ka* (1572 letter) 'boat', *poy ka ?* (1676 Sin.e 1:8b) 'boat'; the first two cases are better explained (by He Wung 338:n49) as the infinitive *'ka* 'go and'. There are six examples after vowels other than *i* or *-y* in a manuscript of 1700- (Hong Yunphyo 1975:88). The clear examples of noun + nominative *i* (reduced to *y*) + *ka* date from the latter part of the 18th century (idem:69), one from 1783 Cahyul 8a (*ce y ka* 'I'), and two from royal edicts of about the same period (*nwu y ka* 'who' and *na y ka* 'I'). Of the same period, also, are these three examples from 1781 Sin.e-cwung: *wuli ka* (2:19a) 'we', *soyngswo ka* (1:7b – translating Japanese *"fa"* = *wa*, not *"ka"* = *ga*!) 'as for the inexperience', and *[SWONGSO] ka* (1:10a) 'envoy'. It appears that after a vowel the nominative marker *i*, having been reduced to *y*, was gradually strengthened by the addition of an emphatic particle *ka*, and then by the 1800s (except for traces of *i ka* surviving in dialects) it completely vanished in most areas, leaving the newly orphaned *ka* to fill the new role of a suppletive alternant of the nominative marker *i*. As was convincingly argued by Hong Yunphyo 1975, the emphatic particle *'ka* attached to the copula *'i'la* and *'i'ta*, just as did the "emphatic" *('i)'za* (the source of modern *(i)ya*) and the "postposition" *'sye* (> modern *se*) deriving from *i'sye* < *(i)si-'e*, the infinitive of *(i)si-* 'exist' (> *iss-*). Hong's scenario: circa 1450 *... *ita ka* → ... *ila ka* → 1600- ... *i ka* → 1800- ... *V i / -C [i] ka* → the present system, in which the earlier flux became systematized, i.e. standardized to the Seoul colloquial. See the note on *ita* for more on this. Because written forms of the language were deliberately kept "literary", therefore archaic, the particle *ka* (like the future *-keyss-* for written *-li-* and the processive *-nunta* for *-nota*) passed unnoticed before observation by foreign missionaries at the end of the 19th century (CF Kim Hyengkyu 1954), e.g. *i mwul i kipki ka elma na holis.ka* (1894 Gale 127) 'about how much is the depth of this water?'.

King 1990 reports a total absence of the nominative marker *ka* in the Korean dialects spoken in the USSR. The replacement of *i* by *ka* (after a vowel) was apparently quite late in the northernmost dialects, as also shown by the lack of attestation in 1902 Azbuka.

ka yo, inf + pcl. goes; does ... go?; go!; let's go!
 -'ke- = -'ka-, effective. SEE -'Ge-; -'e-; 'wona-; 'ho.ya-.

The effective has a less common variant -'ka- after aC-, o-, and i(C)-, but -'ke- also occurs there, as well as after other stem final strings such as a-, e(C)-, oC-, u(C)-, wu(C)-, wo(C)-. The failure of -'ka- to occur after -a- may point to its source as the verb stem °ka-, since 'na'ka- will be taken as 'na'°ka- 'go out' and *'ka-'ka- suggests an unwanted iteration.

After -l-, -y-, copula i- and 'ti- 'drop', the corresponding lenited forms -'Ga- and -'Ge- are used, with the same limitations, except that only -'Ge- appears after y: 'sayGe'tun (1447 Sek 6:19a), 'hyey'Gen 't ay n' (1462 'Nung 1:101a), e'kuyGe'na (1459 Wel 21:169b), 'twayGe'nul (1447 Sek 6:35b), towoy'Ge-ngi 'ta (1550 'Yenghem 8b). Exception: ye'huy'ya 'ys'kasi'n i (1462 'Nung 5:72b), CF 'co'ma 'ys.ke'tun (1459 Wel 10:5b). The lenited -'Ge- and -'Ga- may further reduce to just -'e- and -'a-; those forms occasionally appear where we expect -'ke- and -'ka-. On choosing the vowel-initial forms (-'e-, -'a-) instead of those with a velar initial, see -'e-.

Though we find no competing versions for a given phrase, the choice of the variants seems unmotivated: kap'ka'la (?1468- Mong 31b), 'samke'nul (1463 Pep 4:38a); 'hoka'n ywo (1481 Twusi 16:1b), 'hoke'na (1462 'Nung 8:77a); ne'ki'ka.n i 'Gwa (1459 Wel 10:4b), tinike'na (1459 Wel 17:33b); cis.ka.n i Gwo (1632 Twusi-cwung 14:17a), is.ke'n ywo (1447 Sek 6:13b).

NOTE: The stems made by the effective are sometimes called "intensive" or "emphatic".

This can be followed by -^sup-, -ta, (-tay =) -ta 'y, -ney, -na, -^so, -tula, -tey, -ti, -kwumen (-kwun, -kwun a, -kwulye), -e, -ko, -una(-ma), -uni(-kka), -ci, -ki, -um, -umye, -ummyen (= -tula 'myen), -tumen, -nun, -tun.

NOTE: This marker (like the nominative particle ka for i after a consonant and -nunta for earlier -nota) was little noticed until it was observed by missionaries late in the nineteenth century; instead, archaic forms with -(u)li- (< -u.l i) were written. The only precursor cited by LCT is taken from '1800 Hancock 62: *ani sikikeys.ta ho.n i* '[he] said [that he] would not demand it'. a gossip(monger). *hay palaki* a sunflower. Ramstedt (1938:177) has *calaki* 'a grown-up' but that is unknown to speakers I have asked, for whom the form only means 'growing up'.

NOTE 1: In KEd the ending -*ki* is called the "nominative", but that term is here used only for the nominative case particle *i/ka*.

NOTE 2: The MK ancestor -*ki* was little used, but there are such examples as **NGWUW. 'TUK hon 'salo'm ol 'syey'ye pat non'hwoki 'lol 'KYWELQ 'key* (= *ho'key*) *ho'n i* (1447 Sek 9:19-20) 'had persons of virtue stand up and let them divide the fields', *'mul KWU ho'ki 'mwollwum 'kot ha'n i 'la* (1463 Pep 4:91a) 'seem not to know to seek water', *'kul 'suki 'Gwa kal[h] 'psuki 'GJwa* (1481 Twusi 7:15a) 'wielding pen and sword', and *hon ti 'Gwuy 'thang 'c'a'si'ki mos'kwo* (?1517- Pak 1:64b) 'finished a meal of soup and (then) ...'. See also -*ki l'*, -*ki lol*, and -*ki 'yey*. In ?1517-¹No we find as a gloss for Chinese *bú yào* 'you need not' both -*ti* and -*ki* + aux *'mal-*, as (both 2:7a) *ka'ti 'mal'la* 'you need not go' and *'ne y pwo'nay'ki 'mal'la* 'you don't have to see me off'. ALSO: *'ne y ko'cang 'il 'ka'ki mal'la* (1:26b) 'there's no need to go so early'; *'na 'non 'twuy[h] 'pwo'ki 'ma'ta* (1:37b) 'I don't need to go to the toilet'. Conjoining of two nominalizations is found: *twocuk ho'ki 'Gwa 'ke'cu-'mal nilo'ki 'J' mal.m ye* (2:43ab) 'avoid stealing and telling lies and ...'. SEE -*ti*.

By the 1650's are quite a few examples, including -*ki lwo* (1656 Kyengmin 21b, but with the meaning 'so as to be/do' and not 'because'). An example that shows the nuclear focus found in modern -*ki nun ... ha-*: *cham mata poy yey nolisiki elyepki non cywokwoma hokwo* (1676 Sin.e 6:21a) 'at each port it WAS a bit hard for them to get down to the boat, and ...'. The earlier examples were mostly after a vowel: none of the 26 -*ki* in ?1517- Pak follows a consonant (Katsuki 1986:59).

The ancestor of the suspensive -*ci*, -*ti* (< *t i*), was used more widely in Middle Korean, and in many cases it corresponds to modern -*ki*. Under Kim Wancin's interpretation the hyangga phonograms attest two examples of the precursor of -*ki*: *mas-pwoki* 1:6 (as theme) and *tiniki* 3:8 (as factual object of 'know'). CF ¹Yi Congchel 1983:158.

A peculiarity of the ending **-ki** < **-'ki** is that **haki** < **ho'ki** does not abbreviate to ***khi** (***'khi**) after a voiced sound, unlike forms of **ha-** < **'ho-** with similar endings such as **-ko** < **-'kwo** and **-ci** < **-'ti**. The only abbreviation for **haki** is **'ki** after **-a** or **-e**, and this surely is part of the casual ellipsis of **ha-** after nonhigh back vowels that must be a modern innovation, though early precursors can be found in *i'le* [*'ho-*] and *ku'le* [*'ho-*].

-**ki 'la to**, summative + cop var inf + particle. ¶ **Ku i lul manna poki 'la to hayss.umyen cōh.keyss.**⁵⁰ I wish I could just see him!

killay, adverb. long, for a long time, for ever. [**< kilta adj**]

-**killay** = -**killey**. Roth 1936:306 ("entstanden aus **ki lo**"); Dupont 1965:199; LHS. Ramstedt (1939:105) has -**killay** = -**ki** + -**llay** "a regular case formation in North Korean dialects", labeled (124) as "instrumental-locative" and cited in "NK **aypi llay** 'for the father'", the only example given (but "in NK frequently used with many other kinds of nouns"). According to King 1990 the ¹Yuk-up dialect spoken in the USSR has (i)**llay** and **killay** 'because; since'; he gives the example **hyay illay watta** 'I came because she is my sister'.

Gale (1894:74) attests -**kil.noy** = /**killay**/ " = -**ki ey** (spoken for written -**ki lwo**)"; Cf (1916 Gale 40) **hokil.nay** "An ordinary form of the connective **hokiey** in common use but never used of the 1st person", with these examples:

copwok hokil.nay ywongsye he.yes.swo as he confessed, I forgave him. **cal mek.kil.nay te cwues.swo** he ate it so well that I gave him more. **silhye hokil.nay ku man twues.swo** he did not like it, so I gave it up. Gale wrote "-**l.n-**" regularly for /**ll**/, e.g. (1894:46) **kil.nwo** = **ki lo** 'by the road'.

-**killey**, extended summative [DIAL, colloq]. with the fact of doing; as, since, because. Myongdo (1:2:69) cites the form as -**killay** and says it is "used most frequently when the verb of the main clause is in the past tense" and is also used when one "asks the reason behind a certain fact, event, or occurrence", with the examples: **Yo say mues ul hakillay oci anh.e yo** What are you doing these days that you can't come visit? **Nwu ka wass.killay ileh.key yātan iey yo?** Who has come, I hear such a commotion! **Ku kes i mues ikillay swumkisey yo** What is it that you are hiding?

The etymology of -**killey** (-**killay**) is not entirely clear, but it appears to be a fairly late internal development to be explained along one of the following lines:

(1) < -**ki lo** < -**ki lwo** (1790 Chep.hay Monge 3:3 [LCT 113a]) 'as (being) ...ing' → 'because ...' with the second vowel fronted and unrounded in partial assimilation to the first vowel, or contaminated with -**ki ey** 'in ...ing → because ...'; see below for the doubling of the liquid. But we lack an attestation of *-**kiley** or *-**ki(l)loy** as intermediate steps. And the variant -**killay** (if authentic) must be explained as a back formation due to the confusion of the mid and low front unrounded vowels. It is unclear whether the Ceycwu directional marker **ley** (also **teley**, **leyley**) is a variant of **lwo** or a lenition of **tey** 'place' — or both; Cf **etuley**, **etiley** = **eti lo** 'where to'. And perhaps related is the use of **ley** as a subject marker (Pak Yonghwu 1960:395), for which both **ley** and **lay** are reported from Phyengan (Kim Yengpay 1984:94). Notice that Ceycwu uses -**ki lwo** 'because' (Kang Cenghuy 1988:25n, 27-8).

(2) < -**ki [i]lay** < -**ki ila [ha]y** 'say it will be ...ing' or -**ki il ya** 'will it be ...ing' with metathesis of /**lya**/ > /**lay**/. That takes the variant -**killay** as basic; the standard -**killey** is explained as the usual raising of the low front unrounded vowel in noninitial position.

(3) < -ki lo + adverb-deriving -i (or 'i < hi < h[ɔ]- 'do/be' + -i). Notice also lo-i < lo[w]-i (SEE lopta, suley < sule[w]-i, sulepta).

(4) < -ki l[ɔ] ey with pcl ey.

(5) < -ki [ha]ll^a/e [ha]ly.

The double ll is a reinforcement that could be the result of emphasis, but it is probably just unmotivated, for similar cases can be found in (ce)cel-lo < (ce)ce + lo, muel-lo < mue lo (= mues ulo), kel-lo < ke lo (= kes ulo) and perhaps /kellyo/ = ... ke l'q yo, and as well as the variants -ull(y)e and -ull(y)a for -ulye. But the widespread dialect version ...llu- for the ...lu- stems is better explained as a reflex of the MK lG, as explained in Part I. From earlier sources we find 1887 Scott (28-30) *nallwo* 'by me', *nellwo* 'by you', *illwo* 'by this', as well as *muellwo* 'by what' – but *wuli lwo* 'by us', *nehuy lwo* 'by you', and *nwuy lwo* 'by whom'. There is at least one MK example of *llwo* for the particle *lwo* in the phrase *nal' lwo* *KAY-THWALQ* *khey ho' n i* (1462 *Nung* 7:27a) 'got released (emancipated) from his ego', and also for a variant *le* in the phrase *nalle nun es.ti salla hokwo* 'how will I live?' (?1544- Akcang kasili). See also *'il'lan ? = 'i 'lan* (?1517- Pak 1:17a). An unusual example of liquid-doubling is seen in *'tyey-'il lon* (1518 *Sohak-cho* 8:22a) < *'TYEY-'QILQ on* as for number one.

3. -ko iss.ta, ger + aux v sep (-ko [^{*}ka/]**lul/man/nun** [^{*}to/]**tul/ya iss.ta**); CF -e iss.ta.

3a. is doing. **¶kitaliko iss.ta** is waiting. **sayngkak hako iss.ta** is thinking. **Cikum ku kēnmul ul pak.mul-kwan ulo ssuko iss.ta** They are using that building as a museum now. **Ku hyengphyen ul cal ālko iss.ta** I am well aware of his situation. **Ecci 'na pappun ci phyēnci mōs hako iss.ta** I've been so busy I haven't been able to write. NOTE: When the gerund is from a verb of carrying or wearing -ko iss.ta can be taken as either progressive ('is in the act of putting it on') or resultative-stative ('is wearing'): **mulq tongi lul meli ey iko iss.ta** is putting/carrying a water jug on her head, **cim ul ciko iss.ta** is putting/carrying a bundle on his back, **cim ul mēyko iss.ta** is shouldering a bundle / is carrying a bundle on her shoulders, **moca lul ssuko iss.ta** is putting on a hat / is wearing (has on) a hat. **neykthai lul māyko iss.ta** is putting on a necktie / is wearing (has on) a necktie, **say os ul ipko iss.ess.ta** was putting on / was wearing (had on) a new dress. Certain other verbs are similar: **kāy lul capko iss.ta** is catching the dog, has/keeps hold of the dog; **nwun ul ttuko iss.ta** is opening one's eyes, has/keeps one's eyes open; **pul ul kkuko iss.ta** is turning the lights off, has (or keeps) the lights off. With instantaneous actions the meaning is repetition of the action: **kōng ul chiko/chako iss.ta** is hitting/kicking a ball. (CF 'Yi Kitong 1988:116-7.) The doffing of apparel is like the wearing of it: **kwutwu lul pes.ko iss.ta** will usually translate 'is taking off one's shoes' but it can also mean 'has one's shoes off; is (now) shoeless'.

3b. is/continues in a (changed) state; CF -e iss.ta. **¶pyēngwen ey ip.wen hako iss.ta** is in the hospital. **kako ēps.ta** is gone.

3c. does it repeatedly (or habitually); they are doing it (separately).

3d. SEE -'kuy 's'kwo (wanting it to do/be), CF 5, 9; -ko ce < -'kwo 'cye, -ko cita.

NOTE 1: For the deictic verbs of motion the meaning can be either 3b or 3c, or it may be progressive (3a): **Hānkwuk ey kako/oko iss.ta** means 'is on one's way to Korea', 'visits Korea (repeatedly)', or 'they each go/come to Korea'.

NOTE 2: **kyelhon hako iss.ta** can only mean '(people) are getting married (every day)' or conceivably 'is in the midst of getting married (at this moment)', but (unlike the Japanese equivalent *kekkon site iru*) not 'is/are married', for which Korean uses the past form **kyelhon hayss.ta**.

NOTE 3: 'I am (in the midst of) staying at home' can be said as **Cip ey iss.nun cwung ita** but not as ***Cip ey iss.ko iss.ta**.

4. 4a. -ko nata just finishes doing – usually past (finished); CF nata. **¶pap ul mek.ko nass.ta** has just finished eating/dinner. **pāytaalpu ka ku tay lo cīna kako nan twi 'myen** after the mailman has passed on by as usual [without leaving me anything]. **Meychil cen ey alh.ko na se ip mas ul ilh.e pelyess.^sup.nita** I just got over being sick a few days ago and I've completely lost my appetite. **Kimchi lul mek.ko nani-kka n' ip an i ēl-ēl hata** I've just eaten some kimchi and now my mouth is burning inside. **Pic kaph.ko nan nameci lo cip ul sass.ta** I have paid off the debt and bought a house with what was left. **Silqcik ul hako nani poli pap ul mek.key mace to an toyney** Having lost my job, matters are such that I can't even get boiled barley to eat. **Mom i com kotan hay se swiko nass.tuni mom i kettun hata** I was rather tired, but since I've had the nice rest I feel much better. Some reject this as final in a sentence: (?) **Pap ul mek.ko nass.ta** I have just finished eating; (?) **Eti lul alh.ko nasyess.^sup.nikka** Where were you ailing?

4aa. -ko namyen when/after one finishes. **¶Swuyong ul hako namyen pay ka kopha yo** When I finish swimming, I feel hungry (M 1:2: 219).

4b. -ko mālta finishes up doing it, gets it done/completed; ends up doing, finally does it; does it anyway (despite reluctance, or after procrastination). SEE mālta. CF -ko ya mālta.

4c. = -ko [mālko] of course. ¶Kulem cēng-mal iko [mālko]! Yes, of course it's true!

5. -ko siph.ta, -ko siph.e hanta wants to do(/be). ¶Kwūkyeng ul com te hako siph.ta I would like to do a bit more sightseeing. (Unusual with adjective: Alum-tapko siph.ta I want to be beautiful.) SEE -ko ka/lul/man/nun/to/tul/ya siph.ta.

NOTE 1: N ul/lul V-ko siph.ta can replace the accusative marker by the nominative (N i/ka V-ko siph.ta) but that is not possible for N ul/lul V-ko siphe hanta. ¶Yenghwa lul/ka poko siph.ta I want to see a movie. Mues ul/i mek.ko siph.e? Do you want to eat something? Ku haksayng to yēyki lul com hay cwuko siphe haci anh.e yo? Doesn't that student (show indications that he might) want to tell us something, too?

NOTE 2: The negative is -ko siph.ci anh.ta (because siph.ta is an adjective) and -ko siph.e haci anh.nunta (because siph.e hanta is a verb). Kako siph.ci anh.ta for 'I don't want to go' is preferable to An kako siph.ta.

6. -ko tanita goes around doing, is always doing it. CF -e tanita (regular compounds). ¶in.lyek-ke lul thako/mōlko tanita goes around in/pulling a ricksha. swul man mek.ko (tol.a) tanita goes around drinking all the time. cwumeni lul chako tanita goes around with/carrying a purse. kwūho mulqca lul ket(wu)ko tanita goes around collecting relief supplies. NOTE: LCT's examples of *'koth-* (3) do not seem decisive; they could be taken as *'ko. t [ho]*-, as we have treated them here. Only an example such as *?* 'ko' tha* (inf) = *'kot 'ho' ya* would be clearly an adjective rather than an adjectival noun. Even *'kotco' wo' n i* (1463 Pep 2:227a), *'kot' copno' n i 'la* (1462 ¹Nung 2:45a), and *'kotco' wo. l i 'l 'ss oy* (1463 Pep 5:195b) could be explained as a result of surface assimilation after *'ko. t [ho]zo*... got contracted, and that appears to be historically correct, but our apostrophe notation would not be able to indicate that abbreviation and also preserve the surface consonants, so we write those as part of the stem *'koth-*. For the similar development of another adjective stem, see *'man 'ho' ta* > *'man' tha* = *mānh.ta*.

NOTE 1: The MK pcl *'kwa* was weakened to *'Gwa* after *i*, *y*, and *l* (including *LQ*); with the loss of */G/* the form was further weakened to *['G]wa* = *'wa* after any vowel, but */'kwa/* was restored after *lll*. In 1902 *Azbuka kwa* occurs after vowels as well as consonants, as if the weakening had never taken place. Perhaps the velar was restored by analogy (as after *lll*) or perhaps in certain dialects it never weakened to begin with. Many other cases of MK velar lenition do not surface in modern Seoul, where in everyday speech the particle *kwa/wa* itself is displaced by *hako* or *ilang*. In 1579 *Kwikam 'kwa* is written after Chinese characters (given without Hankul readings) regardless of their pronunciation. The 17th century left several examples of *'kwa* after the final vowel of a Hankul word (Kim Sungkon 1978:117).

3. (= *caylyo*) material(s), ingredient(s). *comi* ~ seasonings, flavorings, condiments, spices.

CF *hyang.lyo* aromatic essences / oils.

NOTE: It is unclear when the SK orthography wants this to be spelled (q)-¹yo. Presumably it MUST be so spelled in *swusenq-¹yo* 'charges for repairs' because that is always pronounced as /swusen¹nyo/ (not ...ll...!) and the word must be listed for NK as an irregularity – or treated as a two-word noun compound *swusenq ¹yo* (= *swusenq ¹yökum*); likewise *wūnpanq ¹yo* = *wūnpanq ¹yökum* 'transportation charge'. But what about /sēythang¹nyo/ 'laundry charges': should we follow the analogy of *swusenq ¹yo* and write *sēythakq ¹yo* or should we follow the analogy of *wenko-lyo* (etc.) and write *sēythak-lyo* (as is done by SK dictionaries for *ipchang-lyo*)? Notice that ¹yō can be a free noun as an abbreviation of ¹yökum. Recommendation: treat it as a separate word (...q) ¹yo whenever that will not conflict with the pronunciation.

This means you can make a negative request by negativizing the giving of the favor or the action that constitutes the favor, and you can mark as honorific (subject-exalting) any verb form and repeat the marking on any or all other verb forms in the structure. The final **māsey yo** could be said in the other styles (**māsyē**, **māsikey**, and **māsio/māsiwu**) – or, without the honorific, as **mal.e yo**, **mālci yo**, **mal(e) la**, **mālci**, (**mal.a** =) **mal.e** = **mā**, **mālkey**, **mao/mawu**.

NOTE 3: According to Roth (1936:436) if the subject is the same in both clauses, 'so as not to ...' is said as **-ci māllye ko**, **-ci ani halye ko**, or **-ci anh.key-sili**; if the subject is different, **-ci mālki lul wi ha.ye** or **-ci mālko lo** is used. But Seoul speakers reject the forms with **māl...** and for the last would say **-ci anh.key haki wi ha.ye**. The form **māltolok** is used only with a following propositive: **Kaci māltolok haca** Let's not go.

mōs < "mwot, adv, adj-n, vn. [In phrases often short.] CF **mopssul** 'useless', **mopsi** 'awfully', **mo-calata** 'is insufficient', **moluta** 'not know'. On the modern spelling, with *s* instead of *t*: p. 102. SEE **mōs hata**, **mōs toyta**.

1. adv. not (possibly), definitely not, never, under no circumstances; can't, won't; no good (a strong denial or refusal; CF **ani**). ¶ **Mōs kakeyss.^{so}** I can't go; I won't go; I refuse to go. **Mōsq ilk.keyss.^{so}** I can't (won't, refuse to) read it. **Ku chayk kacye kaci mōs hao** You are not allowed to take the book; I will not let you take the book. **Na lul peliko nun kaci mōs hao** I will not let you go leaving me behind.

NOTE 1: A (processive) verb can make both the short form and the long form of the strong negative (**mōs kanta** and **kaci mōs hanta** 'cannot go') but adjectives take only the long form (**cōh.ci mōs hata** 'can't possibly be good, is not good at all' not ***mōs cōh.ta**) and the copula does not make a strong negative (the only negative: **A ka B ka ani 'ta** 'A is not B').

NOTE 2: For 'we can't begin' you may say either **sīcak mōs hanta** or **mōs sīcak hanta**, but it is uncommon to find **mōs** before other verbal nouns. For 'we can't try doing it' it is better to say **mōs hay ponta** rather than (*)**hay mōs ponta**. For 'it can't come to an end' you may hear either **mōs kkuth nanta** or **kkuth mōs nanta**. Similar remarks apply to **an**.

2. adj-n, vn. SEE **mōs hata**.

mōs-'c(i) anh.ta, abbr < **mōs haci anh.ta** (adj). is not inferior (to), is just as good (as), is no less (than). ¶ **kap i ul ey ~ A** is as good as **B**. **Ku nun na ey mōs-'ci anh.un pūca 'ta** He is quite as rich as I am. **Ku nun na (ey) mōs-'c(i) anh.key him i sēyta** He is as strong as I am. [Is **mōs-'c(i) anh.key** a new pseudo-particle?] **mōs hata₁**, adj-n. ... **man/pota ~** is lower (in degree/quality/quantity) than ... , is inferior to ... , is worse/less than ... , is not so good/strong/beautiful/much as ¶ **I kkocho i ce kkocho man mōs hata** This flower is not up to that one (in beauty). **Casik i nappun an^{hay} man mōs hata** Having a son is not as good as

having even a bad wife. **Onul sisey ka ecey sisey pota mōshata** Prices today are lower than yesterday's. **Ney cheycwung i nay cheycwung man mōs hata** You weigh less than I do.

mōs hata₂, cpd vt (adv + vi) = [haci] **mōs hata**. cannot do, cannot possibly (do); will not do, refuses to do. **¶Māl ul mōs hanta** He can't talk; He won't talk. **¶Il ul mōs hanta** He can't work; He won't work. SEE **hata mōs hay/ha.ye**. **mōs hata₃**, aux (follows suspensive -ci).

In addition, if we treat the bound verb (emotive) -s[o]- as -s-, there are examples of -ongi in -s-ongi 'ta, rather than -so-*ngi* 'ta. But while -no-*ngi* 'ta might be treated as -n-ongi 'ta the form with the vowel is preferred because in -no-*ta* the vowel seems to be intrinsic rather than merely epenthetic (see page 716, NOTE 1). LCT 1973:335 says that one use of this was to emphasize a fact and in that meaning it attached to adjective stems as well as verb stems. There are examples with *is*- 'exist' and *eps*- 'lack', but each of these stems is uniquely classified as ambivalent with respect to processive versus descriptive. Other examples may involve a stem that functions both as adjective ('is ...') and as vi ('becomes'), like *kwut*- 'is/becomes hard' in the recognized case of *kwutno*'n i (1465 Wen 2:2:105b, 1482 Kum-sam 2:29b) and *kwutno*'n i 'i 'ta (1586 Sohak 4:53b). It is unclear whether this explanation can be extended to *ye*'lum hano'n i (1445 'Yong 2) 'its fruit is [? becomes] plentiful', *polk*'ti *mwot* 'ho'non *cyen*'cho 'lwo (1462 'Nung 1:77b) 'because it is not [? does not become] clear', *e*'tuwu'lak *twolwo* 'hoyno'n i (1481 Twusi 7:14b) 'it is [? gets] dark and then again it is [? gets] light again', and *ZYE-LOY* 'kot'copno'n i 'la (1462 'Nung 2:45a) 'is [? becomes] like the tathāgata' – CF 'kotco'wo'n i (1463 Pep 2:227a). Perhaps LCT's interpretation will help explain the co-existence of *ep*'sun / *ep*'non and *isin* / *is*.non and the development of the unique classes in the modern language with the survival of only some of the forms (*ēps.ta* but *ēps.nun*), and the emergence of *iss.nunta* 'stays' in contrast with *iss.ta* 'exists, is; has'.

NOTE 1: This probably came from a bound verb (')n-, to which the vowel was attached as epenthesis; CF the emotive (')s- and *(')t-. But the form *-no*'ta, which would not call for an epenthetic vowel, forces us to treat the MK basic form as (')no-. The modern -n(un)-ta < -no'ta, which makes a statement, is a new formation unconnected with the MK -non'ta (proc mod + postmod) and -(o)n'ta (mod + postmod), which ask a question.

NOTE 2: The processive is mutually exclusive with the effective -'ke- and retrospective -'te-.

psk, n. time. Usually cited as "psku" but the epenthetic vowel cannot be part of the stem, since the nominative-marked form is 'psk i and not *'psku y, as we would otherwise expect. The less common synonym 'pstay probably originated as a variant *pst (the k assimilated to the s in its locus of articulation) which then incorporated the particle 'ay 'at', but the form was frozen as a noun by the time of the Hankul texts, as shown by the accusative 'pstay ['lɔl (1481 Twusi 8:66a). An attestation that would call for the nominative is lacking, and the marker 'i would be absorbed by the -y in any event, as is the copula stem 'i- in 'pstay 'sil

'ss oy (1449 Kok 50). In the 1600s the word is attested as p^hay and later as stay = ttay, the modern form. The modern descendant of psk is kki = kkini (? < *'psk i'n i 'it is the time'), with the meaning shifted to 'meal(time)'.

...*q*(...). A morphophonemic symbol, used by the Yale Romanization to represent all instances of noninitial reinforcement (... *C* → ...*q C* /...*CC*/, ...*n i*/*y*... → ...*nq i*... /...*nni*/*y*.../, ...*lq i*/*y*... /...*lli*/*y*.../) regardless of the source and whether recognized by the Hankul spelling or not. In certain compounds that preserve a trace of the MK adnominal particle *s* the ...*q* is realized as /...*t*/ or (before *m* or *n*) as /...*n*/.

-*q*(-). 1. an adnominal marker that is largely unpredictable and in South Korea is written (with “*s*”) after a vowel only, but is generally ignored in spelling words from Chinese; in North Korea it is written with an apostrophe after consonants as well as vowels, but is also widely ignored in spelling words from Chinese. An odd case: *yo* ‘mattress’ + *uy* ‘clothing’ → /*yoti*/ ‘mattress cover’, which is spelled “*yos-uy*” in South Korea but in the north is replaced by *yoq twi* /*yottwi*/, with a different etymology (*twi* ‘behind’), it appears. SEE -*eyq*-, *q*, *s*.

2. as an infix, marks a derived intensive and is spelled with a doubled initial obstruent, as in *sseywuta* = *seywuta* ‘stresses, emphasizes’.

q, *Q*. One of the Hankul symbols used in Middle Korean, this was intended to represent a glottal stop. It went unpronounced when initial (*Q*... in Chinese words), but represented reinforcement when final (...*lq t*... = /...*ltt*.../). See also ...*LQ*.

q = *s* (genitive pcl), written in a few texts after a vowel before the word ‘*cco*’ ‘character, letter’. ¶ *NA q ‘cco* (1451 Hwun-en 5b) the character *NA*. *MWU q ‘cco* (?1468- Mong 11b, 12b, ...) the character *MWU*. In 1445 ¹Yong written after vowel or ...*l* with following *pt*...: [*SYEN-“KHOWW” q ‘ptut* (12) his father’s will, *ha’ nol q ‘ptu’ t ul* (86) heaven’s will.

/...*s*/ before pause (noun-final) began merging with /...*t*/ in the early 1500s; the merger was complete by 1700. The /...*s*/ had earlier (by 1450) absorbed /...*c*/ and /...*ch*/.

*s*₁, pcl (genitive); written separately or attached to the preceding or following syllable. Marks the preceding phrase as adnominal or as the subject of an adnominalized predicate. The preceding noun is either inanimate or honorific animate; for the nonhonorific animates MK used the genitive particle ‘*Uoy*’, the source of modern *uy*, which combines the functions of both MK particles. The particle *s* attached to the “free” form of such nouns as *holo* / *holl* ... ‘one day’, *molo* / *moll* ... ‘ridge’, *namwo* / *namk* ... ‘tree’, *nyenu* / *nyenk* ... ‘other’, ... : *holo s a’cho.m oy* (1481 Twusi 8:17b) ‘one morning’, *molo s nam’k ul* (1481 Twusi 24:10a) ‘the ridgepole’, *namwo s pul’hwuy’ lol* (1447 Sek 6:30b) ‘the root of the tree’, *nyenu s ‘i.l ol* (1475 Nay 1:53a) ‘the other matters’. 17. SEE -'ul s.

NOTE 1: Before the particle *s* the resonants // and /n/ were often unwritten (CF He Wung 285, 313-4), and they were probably elided in specific phrases except when the particle was set off by juncture, as in speech slowed down to capture the underlying structure.

¶ 'ye'le pa'lo[l] s ka'won-'toy i'sywo'toy (1462 'Nung 2:84b) they are among the seas and ...; ye'le a'comi 'icey pa'lo[l] s 'ko'z oy 'kay 's[f]kwo (1481 Twusi 8:38a) the aunts are on the tidelands by the seaside, and ... - CF ne-'huy pa'lol s 'ko'z ay 'ka'a (1459 Wel 10:13ab) you people go to the seaside and 'mu[l] s 'kye'l ul ... (1481 Twusi 18:11; cited from LCT) the waves - CF 'PPI-MA-'CILQ-TA 'non pa'lol s 'mul s 'kyel s swo'li 'la 'hwon 'ma.l i'n i (1447 Sek 13:9b) [the name] Vimalacitra is a word that means the sound of the waves of the sea. pa[l] s kala'k o'lwo 'sta'h ol nwu'lusi'n i (1447 Sek 6:39a ['Yi Tonglim version]) he deigned to press the earth with his toes - CF 'pal s kala'k ol 'chokwo (1482 Nam 1:50a) kicking his toes. 'se[l] s to'l ay (1466 Kup 2:58b) in December (> sēt tal ey) - CF 'sel s 'nal (1481 Twusi 20:17a) New Year's day (> sēl nal). i'thu[l] s na'l ay (1459 Wel 1:6b) on the next day = i'thu[l] s na'l ay

(1447 Sek 6:27a). pe'tu[l] s ni.ph i (1482 Kum-sam 4:42b), pe'tul s 'nip 'kwa (1459 Wel 23:91b) willow leaves. mwu[l] s mwoy[h] s pwuli (1632 Twusi-cwung 13:4b) all of the mountain peaks. pskwu[l] s 'pel (1481 Twusi 18:4; cited from LCT) = pskwul pel (1632 Twusi-cwung 18:4a) honey bee. The elision could apply to final -l < -lh, as in mozo[lh] s 'noy (1481 Twusi 15:50b) the smoke of a village - CF mozo[lh] s 'salom (1459 Wel 23:66a) people of the village, village folk. An unusual elision before n- of the string [l s] occurs in 'pwuyn swu'phu[l s] nacwoy s 'hoy s pi.ch i (1481 Twusi 7:4a) the evening sunlight of the empty forest.

¶ swo[n] s twop na'm ye (1462 'Nung 1:51b) fingernails grew - CF 'twu swon s twop 'SYANG 'ol 'CHYUWU ho'l ye (1462 'Nung 3:43b) ready to take the distinctive mark of double fingernails, swon s pa'tang 'ay s 'KWA-'CO (1482 Nam 1:25b) a cake in the palm of the hand. 'CHWON 'ma[n] s 'phu.l i (1482 Kum-sam 4:42b) an inch-high grass fife - CF so-HHWOW 'man s 'NYEM 'two (1482 Kum-sam 2:15a) even the tiniest fraction of an instant (kṣana). nye[n] s kwo'c i'le'la (?1517- Pak 1:70b) it was a lotus blossom. The elision did not apply to final -n < -nh, to judge from cip 'an[h] s 'salo.m ol (1447 Sek 6:5b) the people of the household.

Many (perhaps most) of the -l and -n nouns are spelled with no evidence of the elision: 'syelWun 'il s TYWUNG 'ey 'two (1447 Sek 6:6a) 'even among sad events'; 'nwun s 'sal 'two (1463 Pep 4:53a) 'even the furrow between the eyebrows'. There is no obvious explanation why some nouns have the elision, some do not. Not all of the examples can be dismissed as lexical compounds.

Other common elisions before the particle *s* are peculiar to individual words, such as cip 'house': ku cip[s] s 'sto'l i (1447 Sek 6:14a) the daughter of that house - CF cip s 'i'l ol (1475 Nay 1:84a, 2:1:40b) events of the home; cip s polo'm ay (1481 Twusi 25:2a) on the wall of the house; kutuy s cip s [HYWENG-'TTYEY] uy [KWONG-MYENG] 'i (1481 Twusi 25:48a) the renown of the brothers of your family.

NOTE 2: Between voiced sounds, 1445 ¹Yong often wrote the particle as *z*. The example *psol z CHWO 'lol* (1466 Kup 2:21b) 'rice vinegar' probably has an unwanted baseline mistakenly added while carving the syllable block, for a couple of pages later we find the expected *psol s CHWO 'ay* (id. 2:24a). Several texts have a variant spelling *t* after *...n* before *s...* and *c...*. After a vowel or *...l* the glottal stop *...q* is written before *'ptut*. In 1451 Hwun-en and ?1468- Mong the *...q* is written after a vowel before the word 'cco 'character, letter'; 1465 Wen has examples of *c* before 'cco after a vowel, *...N*, *...NG*, or *...LQ*, but after *...M* it writes only *s* or *p*. In several texts before a voiceless obstruent the particle is written as *p* after *...m*, as *k* after *...ng*. After *...l* the particle is attested at least once with *q* before *c*: "swolq 'ci'n i (1459 Wel 8:10b) = 'swol s 'ci.n ol (1466 Kup 2:63a). A free-standing *W* was written by 1451 Hwun-en after Chinese words ending in *...w*. SEE *c*, *k*, *p*, *q*, *t*, *W*; **s* "swon-'toy > *k* "swon-'toy.

NOTE 3: Before the postmodifiers 'ka and 'kwo (question) the particle *s* functions as a substitute for the copula modifier after the postmodifier 'i or the polite marker -ngi.

NOTE: Except for occasional loose reference (as in 3), the Korean particle always refers to the immediately preceding word or phrase; English translations are frequently ambiguous. The meaning of *to* is mutually exclusive with

that of **un/nun** ('as for') and usually with that of **ya/iya** ('only if it be'), but Pak ¹Yongchel (1904-34) began a poem with the string to **ya** (**Na to ya kanta** 'I go, too') and at least one speaker today finds nothing objectionable about (?) **Na nun iya kanta** 'I, at least, am going'. The sentence **Na nun ya silh.ta** (LHS 1961: 1942a) 'I, at least, dislike it (or: don't want to do it)' uses an abbreviation of **iya**. The particle **to** freely follows other particles and sequences of particles, but **i/ka** (nominative) and **ul/lul** (accusative) drop in standard colloquial usage.

- (6) **Ne-huy tul ese tul kongpu tul hako nol.a la tul.**

NOTE 3: As a particle, the reference is to the "actor", who is usually the subject. But when the sentence is causative or it is passive, the reference can be to the indirect (underlying) subject, whether stated or implied: **Kūlim ul kūlikey tul hasipsio** Get them to draw pictures = **Ku i tul eykey** (or **Ku i eykey tul**) **kūlim ul** In an adnominalized sentence, the plural reference is to the UNDERLYING subject (now the epitheme): **san ey tul iss.tun namu** must be taken as 'the trees on the mountain'. But when the nature of the underlying subject does not permit a plural interpretation, the reference will be to some other noun: **san ey tul iss.tun nwūn** 'the snow which was on the mountains' (1954 Lukoff 201). This represents a kind of loose reference; some speakers will prefer the rephrasing **san tul ey iss.tun nwūn**. Notice that **Cōsim tul hasey yo** means 'Everyone be careful!' and not *'Take every precaution!' Cf LHS 1955:282; ¹Yi Seklin 1955.

NOTE 4: There are variable constraints on the acceptability of structures that contain this particle. It is most comfortable after an adverb, but that phrase should not be placed before an overtly stated subject: **Cal tul hanta** 'They do well' and **Haksayng tul i cal tul hanta** 'The students do well' are both fine, but (?)**Cal tul haksayng tul i hanta** seems awkward, at best. **I kes ul tul hanta** 'They do this thing' is found acceptable by many speakers; (?)**I kes i tul**

cōh.un ya? 'Do you folks like this?' perhaps by fewer speakers; and (?)**Haksayng i tul cal hanta** or (*)**Haksayng tul i tul cal hanta** 'The students, they do well' perhaps by none. Since **I kes tul ul hanta** 'They do (or: He does) these things' (the postnoun pluralizes **kes**) is quite normal, we expect to find also (?)**I kes tul ul tul hanta** 'They do these things' and even (?)**I kes tul i tul cōh.un ya?** 'Do you like these things?' but many speakers will find the two appearances of the morpheme **tul** uncomfortably close in those sentences, to say nothing of such sentences with the particle ellipsed: (?)**I kes tul tul hanta** and (?)**I kes tul tul cōh.un ya?**

NOTE 5: Use 2 (as the ubiquitous particle) seems to be a recent addition to the spoken language, unnoticed till 1937 (Choy Hyenpay).

ul < **'ul**, particle (after a vowel **lul**, abbr **l'**), accusative case marker.

1. marks the direct object of a transitive verb; translates as English object of verb or of verb + preposition. ¶ **sinmun ul pota** reads (or looks at) the newspaper. **sālam ul chac.ta** visits (or looks for, or finds) a person. **mal ul thata** mounts / rides a horse. **thum ul thata** seizes (takes advantage of) an opportunity. **ttay lul kitalita** bides one's time; waits for (awaits)

the time. **sihem cwūnpi lul hata** prepares for the exams. **pap ul mekta** eats one's food / rice, eats (has a meal). **sālam uy meli lul ttaylita** hits a person's head = hits a person on the head. **pata lul poki lul wēn hata (palata)** wants (hopes) to see the sea. **cal haki lul palata** hopes that one will do well. **kuleh.key haki lul cōh.a / silh.e hata** likes / hates to do so (do that). **Hāyngpok / Kēnkang / Sengkong ul pip.nita** We pray for your happiness / health / success. **Ku kes ul / i poko siph.ta** I'd like to see that. **I kes ul kaciko kasio** Take this with you. **I māl ul ku i hanthey cen hasio** Give this message to him.

2. marks the direct object of a transitive passive verb with the meaning "suffers it", and often gets translated as an English preposition. ¶ **cengkayngi lul kkayita** gets hit in the shin. **sonq-kalak ul khal ey peyita** gets one's finger cut on a knife. **kasum ul chayita** gets kicked in the chest. **yakcem ul cap.hita** has one's weak spot seized / played upon. **pal ul cap.hita** gets caught by the leg. **mok ul ccallita** gets one's throat cut; "gets fired". **Kongsan-kwun eykey Sānghay lul ppay-as.kyess.ta** suffered the loss of Shanghai to the Communist troops.

3. marks the goal or direction of a verb of movement, with or without a preceding **pcl ey** (CF **ey, ulo**). ¶ **hak.kyo (ey) lul kata** goes to school. **eti lul kana** wherever one goes (one may go). **Ēncey Sewul ul wass.n' ya** When did you come to Seoul? **Pang ul tul.e kanta** (1936 Roth 278) I go into the room.

4. marks the path of a verb of movement. ¶ **keli lul kēt.ta** walks (down) the street. **hanul ul nalta** files (in) the sky. **kang ul kēne kata** crosses a river.

5. marks the purpose of a verb of movement (CF **hale**). ¶ **yehayng ul tte-nata** sets out on a trip. **yenghwa kwūkyeng ul kata** (or **yenghwa lul kwūkyeng kata**) goes to see a movie. **isa lul ota / kata** moves (house) here / there.

6. marks the duration of a verb (CF **tong-an ey**). ¶ **sahul ul ota** comes for three days. **sam-il ul aphess.ta** was ill for three days. **Sā-nyen ul haksayng ulo ku hak.kyo ey iss.ess.ta** I was in / at that school four years as a student. **Pi ka halo** [= **halwu**] **lul wass.ta** It rained for a day. **Han sikan ul kitalikey** (1936 Roth 278) Wait an hour. **twū sikan ul cam cata** sleeps (for)

two hours. *i mun i ō-payk nyen ul se iss.nun tong-an* during the 500 years that this gate has been standing. *QA-NAN 'i 'CHYWULQ-KA hon 'HHWUW 'two 'su 'mu na 'mon 'hoy 'lol pwuthye cwoico 'Wa* [*← cwoch-cop-(a)*] *i 'sye* (1447 Sek 24:2a) Ānanda has followed the Buddha for over twenty years after leaving home (to become a monk).

7. 7a. marks the frequency ('for ... times'). *¶Sēy pen ul wass.ta* (1936 Roth 278) They came three times. *'cen mo 'l i 'hyen pe 'n ul tin 't ol* (1445 ¹Yong 31) however many times the limping horse may fall.

7b. marks the sequence order of a verb (CF *ulo*). *¶ches ccay lul kata* goes /ranks first.

8. marks the cognate complement of a verb. *¶cam ul cata* sleeps (a sleep). *chwum ul chwuta* dances (a dance). *swūm ul swīta* breathes (a breath).

9. [colloq] as a paraphrase of other particles (often *ey*), *ul* marks various kinds of indirect objects, etc. In sloppy speech that occasionally leads to two objects both marked with the same particle. This usage can be treated as adding emphasis to a specific marker, which need not be (but often is) omitted. See §10.6. CF *N ul pel /sang cwuta* (1936 Roth 277) 'gives a reward /punishment to N, punishes /rewards N'. In most of these structures, the "sloppy object" is best put right before the verb, with a normal object placed earlier: *Chayk ul ku 'nyeca (eykey /hanthey) lul cwuess.ta* 'I gave her the book' sounds better than (?) *Ku 'nyeca (eykey /hanthey) lul chayk ul cwuess.ta*.

9a. = *ey* to, in, on, with. *¶aph-cang ul suta* stands in the van /lead. *Ku ya pelsse yeki lul [= ey (lul)] meych tal iss.uni-kka yo* That's because I've been here a few months already (1954 Lukoff 111).

9b. = *eykey* = *hanthey* to /for (an animate indirect object). *¶Na l' cwe (= Na lul cwue = Na hanthey tālla)* Gimme! (= Give it to me!) *Nwui ka elin awu lul /eykey os (ul) ip.hinta* The sister dresses her little brother. *Sakwa nun emeni lul tulilye 'nta* I intend to give the apple to Mother. *Chayk un sensayng ul poye tulinta* He shows the book to the teacher. *Na lul ola 'l (= na eykey ola ko hal) kkataalk i iss.na?! I see no reason he should ask me to come. ['so- 'HOY] 'lol nyen 'k ul 'cwu.l i 'ye*

(1445 ¹Yong 20) would the four seas be given to anyone else?! With particle ellipted: *la 'kwuy me 'ki.m ye mol me 'kywom 'kot hi* (1482 Nam2: 63b) like feeding a donkey and feeding a horse.

9c. (= *ulo*) as, for, so as to be. *¶Ku ssal ul /ulo pap ul cis.nunta* They use that rice for cooking. *Yengswuk-i lul caki uy myenuli lul sam.ess.ta* He made Yengswuk his daughter-in-law. *Mikwuk ulo yāngca lul kass.ta* They went to America as adopted children.

9d. (= *uy* when it is marking a whole-part relationship, in which either could separately be treated as the object). *¶Poli lul ssi lul ppulinta* I sow the barley seed. SEE §10.6.

10. 10a. marks the direct object of an omitted verb expression. *¶Way ku il ul [māl haci anh.ko] camcakho iss.ess.ni* Why did you keep the matter to yourself (keep quiet on the matter)? *Ku-kkacisq il ul [kaciko] mwe kuleh.key yātan in ya (kekceng in ya, sipi 'n ya, chamkyen in ya)* Why are you raising so much fuss (worrying so much, arguing so much, meddling so much), when it is such a trivial thing?! *Kulenq il ey mwe l' (hako) nōpal-tāypal ia* Why get so mad about it?

10b. *¶Tek.kwuk inmin i Cosen inmin pota sam-pay lul te manh.a yo* (Roth 1936:278) The German people are three times as numerous as the Korean people.

11. marks a transitive relationship between two noun expressions when no verb is expressed. The second phrase is usually marked by the particle *ulo* 'as, so as to be', and the gerund *hako* 'making it' can often be added at the end. *X ul sangtay lo* with X for a counterpart (and opposite number). *¶X ul kipan ulo* with X for /as a basis. *ku kes ul kwūsil lo* with /using that for an excuse. *Sewul ul cwungsim ulo* with Seoul as the center /focus. *munqpep ul cwungsim ulo kongpu lul hata* is working mainly on grammar; is studying with the main emphasis on grammar. *pānto lul mūtay lo (hako)* with the peninsula for a stage. *putong-san ul cētang ulo unhayng ey se pic ul nāyta* gets a loan from the bank with one's real estate as /for collateral. *Sewul ul cipan ulo chwulma hata* runs for election with Seoul for one's constituency.

12. emphasizes a negative expression when it is attached to *-ci* and followed by the negative

auxiliary. **¶kaci lul anh.ta** (or **mōs hata**) just won't go. SEE **-ci lul**; CF **-ci ka**.

13. 13a. emphasizes a desiderative expression when attached to **-ko** and followed by the auxiliary adjective **siph.ta**. SEE **-ko lul**.

13b. emphasizes the purposive. SEE **-ulye lul**.

13c. emphasizes the adverbative, apparently only in the structure **-key lul/ka an toynta**. SEE **-key lul**.

NOTE: Although some of the expressions that can be emphasized by attaching **ul** may be regarded as adverbial, the adverbs in general cannot be so treated. We reject ***ppalli lul kako siph.ta** 'wants to get there fast' (HSIKL 3:384) as well as ***Ku ka cha lul etteh.key lul kochyess.ni** 'How did he fix the car?' (HSIKL 3:390).

14. [JOCULAR] attaches to an infinitive with a following verb or auxiliary – for a humorous effect. **¶mek.e lul pota** takes a bite of it (just to sample it). **tol.a lul kata** trots off home.

15. marks an antithetical clause that ends in a modifier + **kes**. although, but; (it's) too bad (that/yet ...), in spite of the fact that ...; anyway, so there! (used to end a sentence with the meaning 'indeed', or 'despite contrary anticipations/reservations', or 'I guess'.) CF **-ulq ke l'**, **-un ke l'**, **-nun ke l'**, **-tun ke l'**; **-kenul**. **¶Silh.ta ko hanun kes ul pumo ka cāngka lul tulkey hayss.ta** His parents made him get married over his protests (in spite of his refusal). **Keki n' cham pissalq ke l'** (= **Keki nun cham pissalq kes ul**) But that place would be very expensive! **Hayss.tula 'myen cōh.ass.ulq kes ul** I wish he'd done it anyway (but he did not do it). **Ama molusilq ke l'q yo (kellyo)** But you probably wouldn't know, in any event. **Ku yenghwa nun cangcha wuli Inchen ey to olq ke l'** After all, that movie will come to us in Inchen one of these days. **Ku nun māl ul cal hatun ke l'** He spoke well, after all!

16. **¶Hānkwuk-e 'na Hānqca-e 'na lul mullon hako** regardless whether it is Korean or Sino-Korean (Chinese). **Ecci palqtal toyess.na lul poca** Let's see how it has developed.

17. marks an object raised from the subject of a putativized sentence: **(na nun) ku namca ka maum-ssi ka cōh.ta ko mit.ess.ta** 'I believed that he was of good nature' → **ku namca lul maum-ssi ka cōh.ta ko mit.ess.ta** 'I believed

him to be of good nature', but not ***ku namca lul maum-ssi lul** ... for only one nominative phrase can be raised to serve as the object of a putative sentence (as was observed by Choy Yengsek 1988:178:n8): **ku namca uy maum-ssi ka cōh.ta ko mit.ess.ta** 'I believed that his nature was good' → **ku namca uy maum-ssi lul cōh.ta ko mit.ess.ta** 'I believed his nature to be good'.

18. in MK marks the underlying subject of a causativized verb (where we expect a dative): **“HHWUW s “salo'm ol “al'Guy 'honon ke's i'la** (1447 Sek se:1a) it is (written) so that later people may know. CF 9.

NOTE 1: Sequences of **ul/lul** followed by another particle (**ul man**, **ul cocha**, ...) are just literary or formal variants of colloquial expressions in which the **ul/lul** is omitted. But the particle obligatorily drops before the focus particles **un/nun**, **to**, and **ya/iya**. SEE **ey lul**, **ey l'**; **eykey lul**, **hanthey lul**.

NOTE 2: The MK particle has two versions, **'ul/ 'lul** and **'ol/ 'lol**. The shapes **'ul/ 'lul** are usually picked when the vowel of the preceding syllable is **u** or **wu**, as in **mu'su'k ul** (1459 Wel 7:28b, 9:23b), **'ptu't ul** (1447 Sek 13:43b, 1459 Wel 2:64a, 1463 Pep 3:47a, 3:180b), **e'nu 'nwu 'lul** (1449 Kok 52), and **i 'twul'h ul** (1449 Kok 52). But there are a few examples of the other shapes: **e'nu 'lol** (1482 Kum-sam 2: 69a); **SSYANG-TTYWU 'lol** (1462 ¹Nung 6:66a), **[KYWULQ-YWUW] ['l]lol** (1481 Twusi 20:34b), **'cwu.l ol** (1481 Twusi 15:47b), **'LYWULQ 'ol** (1462 ¹Nung 1:19a), **'swu 'lol** (1459 Wel 21: 14a) – CF **'swu 'lul** (1463 Pep 3:86a). After a syllable with **uy** or **wuy** both versions occur, but **'ol/ 'lol** seems to be more common: **e'tuy 'lol** (?1468- Mong 13b), **'PEP-NGUY 'lol** (1447 Sek 13:26b), **'NGUY lol** (1465 Wen 2:3:2:68a), **[LWOK-KUY] 'lol** (1481 Twusi 8:3b), **[KUN-KUY] lol** (1481 Twusi 20:52a); **pwul'hwuy 'lol** (1447 Sek 6:30b, 1449 Kok 99), **MWU-ṘWUY 'lol** (1462 ¹Nung 6:43a), **TTIN-LYWUY 'lol** (1462 ¹Nung 1:24b), **[QAN-NGWUY] 'lol** (1481 Twusi 10:12a), **SSYANG-SSYWUY 'lol** (1459 Wel 17:23b) – but **KWOLQ-ṘYWUY lul** (?1468- Mong 32b), **ṘWUY'h ul** (1447 Sek 19:10a), **TYWUNG-KWUYK 'ul** (1459 Wel 1:30a).

The higher-vowel shapes are common when the syllable of the preceding syllable is **e** or **ey**,

as in *ne 'lul* (1447 Sek 23:24b, 24:3a; 1459 Wel 8:101a, 8:86a; 1462 ¹Nung 1:90b; 1481 Twusi 7:20a; 1482 Nam 1:44b; ...) and *ke's ul* (1462 ¹Nung 8:86b, 1481 Twusi 8:34a, 25:29a; ...), *"ney'h ul* (1459 Wel 10:4b) and *'thyey 'lul* (1518 Sohak-cho 10:27a). Only a few examples are found of the lower-vowel shapes, as in *pwuthye 'lol* (1463 Pep 5:121b) – Cf *pwuthye 'lul* (1447 Sek 6:19a, 9:24b), *mu'se's ol* (1588 Mayng 13:26b), and *kulu'mey 'lol* (1447 Sek 24:20b). But after *...Yey* the only examples are of *'lol*: *MYENG-SSYey 'lol* (1447 Sek 6:8b), *'SYey lol* (1463 Pep 4:148b), *'KKYey 'lol* (1447 Sek 19:31b, 1463 Pep 6:83a), *SAM-PPWO-TTYey 'lol* (1447 Sek 19:34b, 1459 Wel 21:222a, 1463 Pep 2:6b), *CHYENG-TTYey 'lol* (1459 Wel 23:93a), *'SYey lol* (1463 Pep 4:148b), *'PHYey 'lol* (1475 Nay 1:77a).

After *wo* or *woy* the lower-vowel shapes are usual, as in *coy'cwo 'lol* (1463 Pep 1:49b), *PPEN-[~]NWOW 'lol* (1459 Wel 1:18a), *'mwo.m ol* (1482 Kum-sam 5:48b), *'swon 'ol* (1586 Sohak 6:102b), *LYWONG 'ol* (1447 Sek 6:32a, 1449 Kok 192); *ca'chwoy 'lol* (1462 ¹Nung 2:114b), *NGUY-[~]HWOY 'lol* (1463 Pep 2:24a), *['[~]CCWOY 'lol* (1481 Twusi 24:13a). The other shapes are not attested after *woy* and I have found only two examples after *wo*, *SSYWUN-PWONG 'ul* (1463 Pep 4:148b) and *['[~]KALQ-HHWONGJ 'ul* (1481 Twusi 21:34a). After *a*, *ay*, *o*, or *oy*, the shapes *'ol' 'lol* are overwhelmingly favored, as in *"na 'lol* (1447 Sek 6:4a; 1459 Wel 8:98a, 9:35d; 1481 Twusi 23:44a), *na'la'h ol* (1459 Wel 7:29b, 1463 Pep 2:77a), *nwol'Gay 'lol* (1459 Wel 21:190a), *yang'co 'lol* (1447 Sek se:5a, 1459 Wel 8:19b), *'hoy 'lol* (1447 Sek 24:2a), *ZYE-LOY 'lol* (1459 Wel 17:36b, 1464 Kumkang 69b), *'CYWUNG-SOYNG 'ol* (1447 Sek 6:5b, 1482 Nam 2:6b). But there are rare examples of the higher-vowel shapes: *'SYWU-[~]HWA 'lul* (1588 Mayng 13:19b), *kesang 'ul* (1475 Nay 1:70b), *'KUM-[~]KAY 'lul* (1462 ¹Nung 8:77a), *na'kunay 'lul* (1481 Twusi 15:31b).

After syllables containing the vowel *i* both versions occur, but the low-vowel shapes are more common. For a given word I have not found competing versions: only *"i'l ol* (1447 Sek 6:18a, 6:27a, 19:40b; 1459 Wel 8:8b, 10:21a, 18:7b; 1481 Twusi 8:24b; ...) 'affair' and *'i lol* (1449 Kok 121, 1482 Kum-sam 5:

14a, 1481 Twusi 7:23b) 'this'; only *ci'p ul* (1449 Kok 45, 1462 ¹Nung 1:53a) 'house'.

-ul(q) < -'ul(q), prospective modifier [after a vowel *-l(q)*]. Initial *p t c s k* of a following word are regularly reinforced to *pp tt cc ss kk*, unless a pause is inserted, so we write *-ulq p...* etc. Most of the cases of word-initial *y* and *i* (including *'y 'y 'i 'i*) are treated as *ny* and *ni* when directly preceded by a consonant, so what we write as *-ulq y...* (*i...*) is pronounced */ully.../* (*/ulli.../*). The modern Hankul spelling usually ignores all these reinforcements. The earlier texts sometimes did the same, but quite often they wrote *...q* or geminated the following obstruent. On a possible source of the *...q* see *-'ul s*.

1. ... that is to be/do; ... that will be/do; ... that one will do (at/to/from/with). *'catong-cha lul phalq sālām* the man who will (is to, wants to) sell the car; the man with the car for sale. *ku sālām i phalq catong-cha* the car that the man will sell; the car that the man has for sale. *ku sālām i catong-cha lul phalq kos (sikan)* the place where (time when) the man will sell the car. *ssulq phyēnci* letters to write. *phyēnci lul ssulq sālām tul* persons to write the letters; persons to write letters to. *na hanthey phyēnci lul ssulq sālām tul* persons to write letters to me. *nay ka phyēnci lul ssulq sālām tul* persons for me to write letters to. *tte-nal nal* the day that one is to leave. *Na hako kath.i wūntong halq sālām ul chac.nun cwung ita* I am looking for someone to play (the sport) with me. *Kulelq casin i ēps.ta* I lack the confidence to do that. *Ku kes un ecci halq tōli ka ēps.ta* There's nothing to be done about it. *Halq il i mānh.ta* There is lots to do (to be done). *Na nun yēnkuk-cang ey kal heka lul (helak ul) et.ess.ta* (1936 Roth 548) I have (obtained) permission to go to the theater.

NOTE 1: **-(ess)ess.ul** and **-ul.nun** also occur.

NOTE 2: After a consonant-final stem the MK ending has the two shapes **-ul(q)** and **-ol(q)**. Choice of the shape is determined by the vowel of the preceding syllable. After *aC*, *oC*, or *woC* only **-ol(q)** occurs, as in *tas'kol* (1447 Sek 13:36a), *mo'chol* (1447 Sek 6:3b), and *two'tolq* (1449 Kok 14). After *e*, *uC*, *wuC*, or *iC* only **-ul(q)** occurs, as in *me'kulq* (1459 Wel 8:8b), *sul'hul* (1459 Wel 2:22b), *cwu'kul* (1459 Wel 7:18b), and *mi'tulq* (1447 Sek 6:11b).

Stems ending in **-l-** reduce the expected strings *l-ul* and *l-ol* to just *l*, as in *'ilq 'ka* (1462 ¹Nung 4:38b) < *'il-* 'be formed' and *'tul* (1463 Pep 1:55b) = *'tulq* (1462 ¹Nung 2:114b) from *'tul-* 'enter' – compare *tulul* (1447 Sek 6:8b, 1462 ¹Nung 2:107a) < *tut-* 'listen'. But before the postmodifiers *'i* 'fact' or *'ye* (also *'ya* ?) 'question', only the epenthetic vowel is suppressed, leaving *lll*: *'tull i 'la* (1462 ¹Nung 8:40a), *'ill i 'le'n i* (1445 ¹Yong 123), *'mel'l i 'ngi s 'ka* (1459 Wel 8:1b), *'all i 'Gwo* (1459 Wel 21:14a; 1481 Twusi 15:37b, 47b). The postmodifier itself sometimes vanishes: *'yell [i] 'ye'n ywo* (1481 Twusi 7:25b). Notice that the basic forms (such as **'tululq*, **a'lolq*, ...) never surface except in one of the two reductions: as *'tulq* or *'tull (i)*, as *'alq* or *al'l (i)*, When the contractions were made, those stems which begin with the low (unmarked) pitch kept the high accent of the ending and blended it with the low pitch to produce the rising tone marked with the double dot (ˊ); that is why the dictionary form (= the indicative assertive) of an **-L-** verb begins either *'...* or *ˊ...*. The modulated prospective modifier is formed as expected, with the **-l-** of the stem (and its high or low basic accent) intact, simply appending the modulator and the ending of the prospective modifier (**-w^uolq**), as in *mu'sum pho'lwol ˊil* (?1517-¹No 2:3a) 'the business of what to sell' and *sa'lwol ˊchye'swo 'lol* (1518 Sohak-cho 8:3a) a home to live in

NOTE: (1916 Gale 81) "*hol.nak mal.nak howo* [= *hal lak māl lak hao*] expresses indifference, inattention to the work on hand or interruption of the same".

This structure might be a contraction of *-u(I)la k[ə] = -ulye ko*, as suggested by M 3: 3:103. If so, the postmodifier *ak* is a new entity and perhaps just an artifact of the analysis. The dialect variant form *-tak* suggests that */lak/* may, instead, be a lenition from */tak/*, which looks like a shortening of *-ta ka*; but some kind of restructuring would have to be posited to account for the epenthetic *u* after a consonant stem. Neither of these two histories, however, seems likely in view of the examples from early Hankul texts which show a structure identical to the modern one. Yet, since *-(^u)lak* also had the meaning of *-ta 'ka*, perhaps it was a lenited variant from early on (CF *'ila 'ka*). SEE *-u'lak*. *-(^u)lak*, nonfinite ending (? < *-(^u)ol 'ak*, ? < *-ta k[a]*).

^uo' lwo ('lwo after vowel or l or LQ), pcl = ulo. After a consonant (other than l or LQ) the MK particle has two shapes, 'u' lwo and 'o' lwo, and there is a less common variant 'wo' lwo. After oC the shape is always 'o' lwo, as seen in *han 'salo'm o' lwo* (1463 Pep 2:22a) 'for people in large numbers' and *mozol'h olwo* (1481 Twusi 7:39a) 'to the village'. After aC the shape is usually 'o' lwo, as in *nilu'syan 'yang 'o' lwo* (1447 Sek 6:24b) 'as you say' and *'kal.h olwo* (1462 ¹Nung 6:109b) 'with a knife', but there at least two examples of 'u' lwo: *'PI-LYANG 'u' lwo pu'the* (1463 Pep 2:41a) 'stemming from comparison and inference', *'e'tin namzin 'in 'yang 'u' lwo* (?1517- ¹No 2:54b) like a good fellow. Only the shape 'u' lwo is used after uC

and wuC, as in *SSIN-'LUK 'u' lwo* (1447 Sek 6:7b) 'by the divine power' and *mu'su.k u' lwo* (1462 ¹Nung 1:84a) '(making it) into what', *'skwu.m u' lwo* (1445 ¹Yong 13) 'in a dream' and *wu'h u' lwo* (1447 Sek 13:13b) 'up(wards)'. And 'u' lwo is usual after eC, as in *'i ke's'u' lwo* (1463 Pep 2:77a) 'for this' and *'PEP 'u' lwo* (?1468- Mong 35a) 'according to the Law', but we also find *hon nye.k o' lwo n'* ... *hon nye.k o' lwo n'* (1446 Sek 6:3a) 'on the one hand ... on the other hand' and *'SSIP-'SSYEN 'o' lwo* (1459 Wel 1:25b) 'to the ten virtues'; notice too *'i'le 'n 't olwo* (1462 ¹Nung 1:18b, 1463 Pep 7:140a, 1481 Twusi 7:27a, 1482 Kum-sam 2:15b) 'hence, thus'. After iC both versions occur: *'pul s 'pi.ch o' lwo* (1447 Sek 9:4b) 'with the radiance of fire', *'him 'olwo* (1482 Nam 1:50b) 'with one's strength'; *na 'y 'hen ci'p ulwo 'syé* (1481 Twusi 20:52a) 'from my shabby home', *'TTAY-SSING 'u' lwo* (1459 Wel 13:36b, 1463 Pep 2:6b) 'through the Greater Vehicle'. The only two examples I have found with VyC take 'o' lwo: *'CYWUNG-SOYNG 'o' lwo* (1447 Sek 13:27a) 'by all living beings', *'twuy.h o' lwo tol 'Gywo'm ay* (1459 Wel 13:32a) 'because it depends on the future'. The derived substantives that end ...em or ...am go back to the effective substantive -^eam. SEE -um cik hata (NOTE 2), -u'l i 'Ge'm ye.

NOTE 3: After a consonant, the MK ending has two shapes, -um and -om. The choice of shape depends on the vowel preceding the stem-final consonant. After a, o, or wo the shape is -om, as in **capo.m ye** (1481 Twusi 7:6b), **to'zom 'ye n'** (1465 Wen 2:3:1:46a), and **'wolho'm ye** (1463 Pep 1:10b). After other vowels + consonant the shape is -um, as in **ke'mu.m ye** (1481 Twusi 7:27a), **tulu'm ye** (1459 Wel 17:34b) < **tut-** 'hear', **cwukuf'jm ye**

(1481 Twusi 8:29a), *il'hu'm ye* (1459 Wel 13:32a). The Middle Korean substantive marks a nominalization (like modern modifier + *kes*). Except when followed by *ye* (from the copula infinitive), the ending is usually attached (as *-m*) to the modulated stem, which ends in *-wo-* or *-wu-*, according to the rules for attaching the modulator, so that the forms end *-wom* or *-wum*. But there are several examples of unmodulated substantives before the particles *'uol*, *'i*, and *'eay*: *taf'jsof'jlim 'ul* (1586 Sohak 6:35b), *sa'hwo.m ol* (1481 Twusi 7:39a, 20:4b); *mo f'jchof'jm ay* (1463 Pep 1:84a, 1481 Twusi 7:9b), *mo'cho.m ay* (1475 Nay 2:2:14a, 1482 Kum-sam 2:12b, 1482 Nam 1:43b), *mo'cho'm ay* (1459 Wel 10:16a, 1462 ¹Nung 1:4a, [?]1468- Mong 52b); *'co.m i* (1482 Kum-sam 2:65a); *'skwu'm ey s elkwu'l* (1459 Wel 2:53a). While these examples are lexical nouns, not sentential nominalizations, such is not true of *'kye'sim 'ay* (1586 Sohak 6:122a) – but that is probably broken type for *'kyesya'm ay* ‘in his staying’, nor of *'sa'lo'm uy a'lomtye s 'ywu'mwu 'lul ye'ze pwo'm i a'ni 'hwol 't i.n i 'la* (1518 Sohak-cho 8:22a) ‘one is not to peek into other people’s private letters’, or *[sywupak i.m ye poy 'm ye kywul theye yey s/ ke.s ul meki.m i mas.tang thi ani ho.n i* (1608 Twu-cip 2:4b) ‘it is unsuitable to feed them things [such as watermelon or pear or orange]’. In *'pis 'na'm ol* (1481 Twusi 24:30ab) ‘the (shining =) glory’ *'nam* is accentually reduced from *'nam*, the modulated substantive; CF *mas-'na.m i* (1462 ¹Nung 5:85a) ‘meeting’.

-'u^om ye, subst + cop inf (> -umye). NOTE: Although otherwise the copula after a vowel is written with an apostrophe 'y... (including the other use of the infinitive, as a quasi-particle 'i'ye/'ye 'and'), this string was in transition to an integrated ending, just as we write it for modern Korean. In other uses the substantive was normally modulated (-'wo-m, -'wu-m), but when it was followed by 'ye or by 'ye n' the unmodulated form was usual. In this formation only, the substantive of -L- verbs, basically ... 'l-um or ... 'l-om, was reduced a syllable by omitting the epenthetic vowel: 'kwot 'i 'sywo 'yn 't ol 'al'm ye (1482 Kum-sam 2:3a) 'knew at once that it was this ox, and ... '. The expected (*)a'lom 'knowing' was normally

replaced by a'lwom with the modulator -'wo-, as in 'ssilq 'two 'ptut a'lwo'm ol pu'thwul 'ti i.n i 'la (1463 Pep 4:148b) '... one will have to rely on really knowing the meaning', but it appears unmodulated in specialized meanings 'one's purview, private matter / thing' (whence the adverb a'lom-tye < *a'lom ti'ye 'privately, personally') and is probably incorporated in the adjective stem a'lom-taW- 'beautiful'. When the unmodulated form occurs, it is often to be taken as a substantive-derived noun: 'sa(')lom means 'person', while sa'lwom means 'living, life' (1449 Kok 143; 1481 Twusi 8:29a) despite LCT's (1682) example of salwom 'person'; cwu'kem (1459 Wel 9:36a, 1463 Pep 2:108b, 1481 Twusi 20:16a), with the effective -[k]e-, means 'corpse, dead person' while cwu'kwum (1449 Kok 123) means 'dying, death' – in contrast with the unmodulated cwukuf'jm ye (1481 Twusi 8:29a). CF -u'l ye > -ulye, where 'ye is the postmodifier 'question' (= 'ya).

-un--- SEE ALSO -on---

un < 'u'on, particle (after vowel nun < 'n'u'on, abbr n' < 'n'). "as for": marks the theme, subdues the focus on the preceding word or phrase in order to foreground the rest of the sentence for various reasons, including these:

1. Because the sentence is long you choose some part or parts as the least novel, the most easily omitted. ¶Na nun cīnan tho.yoilq pam ey kongwen ey se chinkwu lul mannass.ta (Me — what I did was this:) I met a friend last Saturday night in the park. Cīnan tho.yoilq pam ey nun nay ka kongwen ey se chinkwu lul mannass.ta Last Saturday night I met a friend in the park. Ku chinkwu nun cīnan tho.yoilq pam ey i kongwen ey se nay ka mannass.ta (That friend —) I met him last Saturday night in this park. Cīnan tho.yoilq pam ey nun na nun kongwen ey se (nun) chinkwu lul mannass.ta I met a friend and it was in the park, last Saturday night. Tal un han hay ey yelq-twu pen tōnta The moon rotates twelve times (in) a year. Nala nun cwuqkwen kwa 'yengtho wa kwuk.min ulo toye iss.ta A nation is made up of sovereignty, territory, and people.

2. Because the item has been mentioned before, it is OLD information, so you subdue the emphasis when you repeat it. ¶Pokswun-i ka tal ul chyē 'ta pwass.ta; tal un maywu palk.ess.ta Pokswun-i looked up at the moon; it was very bright. Pokswun-i ka tal ul chyē 'ta pwass.ta; kuliko ku ay nun sulphe cyess.ta Pokswun-i looked up at the moon; she fell sad.

3. Some other part of the sentence demands foregrounding because it is a focus of inquiry or denial. ¶ **Ne nun mues ul hanun ya** What are you doing? ¶ **Ttek un nwu ka mek.ess.nun ya** Who ate the rice cake? ¶ **Kim sensayng un ẽncey tte-nasinun ya** When is Mr Kim leaving? ¶ **Kwũkyeng un mōs hayss.e yo?** Didn't you do any sightseeing?

4. Two items in contrast are backgrounded so as to play up the points of contrast. (Notice that English puts stress on the items, not the contrasts.) ¶ **Na nun Pusan se oko, chinkwu nun Māsan se wass.ta** I come from Pusan, and my friend comes from Masan. ¶ **I kes un cōh.ci man ku kes un nappe yo** THIS one is good, while THAT one is bad. ¶ **Pokswun-i nun pucilen haci man, awu nun com keyuluta** Pokswun-i is hard-working, but her little brother is a bit lazy. ¶ **Cal un hatoy olay nun mōs hanta** He does it well but not for long.

NOTE 1: The meaning of this focus particle is mutually exclusive with those of *ya/iya* (only if it be) and *to* (also, even). The particle freely follows other particles and sequences, but *i/ka* and *ul/lul* obligatorily drop. SEE *-ko nun*, *-ki nun*, *-e nun*, *-ci nun*.

NOTE 2: The MK particle has two versions, *'un/ 'nun* and *'on/ 'non*. The more common version is the latter. The shapes *'un/ 'nun* are usual when the vowel of the preceding syllable is *u* or *wu*, as in *'ptu.t un* (1481 Twusi 23:9b), *il'hwu'm un* (1463 Pep 2:222b), and *LWUW 'nun* (1447 Sek 6:2b); but even so there is an occasional example of the version *'on/ 'non*, as in *'kuyGwun 'on* (1482 Kum-sam 2:29b). The higher-vowel shapes are also found when the syllable of the preceding syllable is *e* or *ey*, as in *ke's un* (1463 Pep 6:144a), *"NGE nun* (1451 Hwun-en 1a), and *"twuy.h ey 'nun* (1445 'Yong 30); but the lower-vowel shapes also occur and seem to be more common, as in *ce 'non* (1459 Wel 13:35ab), *ne 'non* (1481 Twusi 8:7a, 1482 Kum-sam 2:5b), and *"THYey 'non* (1447 Sek 19:10b). Only the lower-vowel version occurs after a syllable with the vowels *uy* and *wuy*, as in *'SYE-KUY 'non* (1447 Sek se:6a) and *NGWUY-NGWUY 'non* (1459 Wel 1:1b); likewise for *oy*, *woy*, *ay*: *kutoy 'non* (1481 Twusi 8:24a), *SYEN-SOYNG 'on* (1482 Nam 1:30b), *kama'kwoy 'non* (1481 Twusi 22:39b), *"NAY 'non* (1459 Wel se:

13a). When the preceding vowel is *o* or *wo* or *a* only the lower-vowel version occurs: *'CHO 'non* (1447 Sek5a), *'no'm on* (1445 'Yong 24), *"salo'm on* (1447 Sek 6:22a, 1466 Kup 2:64a, ...), *kwo'c on* (1447 Sek 23:40b), *SYWOW 'non* (1447 Sek 13:53a), *'na 'non* (1447 Sek 6:5a, 1462 'Nung 1:86a, ...), *"ma'l on* (1447 Sek 6:36a, 9:27a). An exceptional case: *KKUY-NGWAN 'un* (1475 Nay 1:28b). After a syllable with *i* there are examples of the higher-vowel version, as in *'TTAY-SSING 'un* (1459 Wel 1:37a), but *'on/ 'non* is the norm: *'i 'non* (1462 'Nung 4:27b), *a'coma 'ni'm on* (1447 Sek 6:1a), *NGUY-SIM 'on* (1447 Sek 24:3b), ...

NOTE 3: SEE *'non* (NOTE).

NOTE 1: For some of the *-L-* stems, there are variant modifier forms as if made from *-LL-* stems. Besides regular *ecin* < *ecilta* 'is kind' there is the variant *ecilun*, and besides regular *situn* < *situlta* 'withers, wilts' there is the variant *situlun*. Compare some of the irregular substantives (like *el.um* 'ice', differing from *ēlm* 'freezing').

NOTE 2: After a consonant-final stem the MK ending has the shapes *-un* and *-on*. Choice of the shape is determined by the vowel of the preceding syllable. After *aC*, *oC*, or *woC* only *-on* occurs, as in *na'mon* (1447 Sek 23:13a,

1459 Wel 8:91b), *ko'con* (1459 Wel 8:97a, 1463 Pep 2:176b), and *tywohon* (1459 Wel 8:90a); the exception *nwo'phun* (?1517- Pak 1:5a) for *nwo'phon* (1481 Twusi 15:37b) is unusual. After *e*, *uC*, *wuC*, or *iC* only *-un* occurs, as seen in *me'kun* (1459 Wel 1:43b), *nul'kun* (1481 Twusi 7:10a, 22:7b), *cwu'kun* (1447 Sek 24:28a), and *ki'phun* (1445 'Yong 2, 1447 Sek 9:27a). Stems ending in *l* reduce the expected strings *l-un* and *l-on* to just *n*, as in *mwo'tin* (1447 Sek 9:24b; 1459 Wel 8:69b, 9:24b) < *mwo'til-* 'bad', *men* (1447 Sek 13:59a, 1459 Wel 7:12b) < *mel-* 'distant', *sun* (1462 'Nung 9:86a) < *sul-* 'vanish', *wu'n i* (1447 Sek 24:20b, 1449 Kok 80) < *wul-* 'cry', *cwon* (1463 Pep 1:190a) < *cwol-* 'shrink', *skon* (1482 Kum-sam 3:59a) < *skol-* 'spread it', *an* (1462 'Nung 9:13a) < *al-* 'know'. Another way to describe that: the final *l* drops so that the ending is attached without the epenthetic vowel, as expected after a stem that now ends in a vowel. The basic shape of the *-L-* stems is *...l^uo-* but in the surface forms this is reduced by dropping the vowel or the whole syllable; for stems which begin with a basic low (unmarked) pitch, the high accent of an ending is kept and blended with the low to produce the rising tone marked with the double dot ("); that is why the dictionary form (the indicative assertive) of an *-L-* verb begins either *'* or *...*. The modulated modifier is formed as expected, with the *...l-* of the stem (as well as its high or low basic accent) retained, by simply appending the modulator before the modifier ending (*-w^uo-n*): *pi'lwon pa'p ol* (1449 Kok 122) the food [just now] begged; *wo'nol za a'lwo'n i* (1463 Pep 4:36a) that I just today found out ...

2b. (adverbs). **¶phek una** really quite. **yepuk una** (not) to any small degree, indeed. **cak-hi na** not much.

NOTE: After a vowel it is not always easy to tell whether */na/* represents *'na* (= *ina*) or *na* (= *una*). When in doubt, we treat it as *ina*:

āmuli 'na 'surely', *hāyng-ye 'na* 'fortunately', *kuli 'na* 'that way', *nemu 'na* 'ever so much', *kkway (kk'ay) 'na* '(fairly) well/much', *te 'na* '(any) more'. The word that is usually spelled *tewukina* 'still more' could be treated either as *tewuk-i na* (as in KEd) or as *tewuk ina*, but *kattukina* 'on top of that/everything, still (more)' is probably best viewed as *kattuk ina* rather than *kattuk 'i 'na* (< ? *kattuk hi ina*), so we will treat them both the same (as *ina*). After indeterminates *na* represents *ina* (= *itun ci*): *elma 'na*, *ecci 'na*, *etteh.key 'na*; CF *enu kes ina*.

CF 3. There may be MK evidence for a sequence of two markers *i uy* (reduced to *-y uy*), in that when they are the subject of a nominalization (or an adnominalization) *na* 'I' and *ne* 'you' appear as *nay* ⁴⁰*oy* and *ney uy* (CF He Wung 356), as in *nay uy [SYWUY-⁴⁰ LWOW] hwo.m on* (1481 Twusi 22:27b) 'that I am getting old and frail', *ney uy e'mi ku'lye hwo'm i* (1459 Wel 21:22a) 'that you long for [your] mother'. But in *nay uy [CHA-THA] hon mozo.m ol* (1632 Twusi-cwung 21:23b) He Wung prefers the construal 'my faltered heart' with a genitive modifying the phrase 'the heart that has faltered' over one that might mean something more like 'the heart with/in which I faltered'; he is perhaps wrong, as he may be when he seems to take *nay oy tu'liGwun swon* (1462 ¹Nung 2:19a) as 'my hands which [I] have let dangle' rather than 'the hands which I have let dangle', both to be translated 'my dangling hands'. A stronger example for the genitive: *nay oy mozom kwa nwu'n ol pswu'n i -ngi 'ta* (1462 ¹Nung 1:45a) 'it used my heart and eyes'. SEE *nay uy*, *ney uy*.

The most common source of the epitheme (= the head of the adnominalization) is an extruded object: *SA-MWON on no'm oy ci zwun nye lu'm ul mekno'n i -ngi 'ta* (1447 Sek 24:22a) the begging monk (śramaṇa) eats fruits that others have grown; *SYWU-TTALQ oy ci zwun TTYENG-SYA ma'ta tu'lusi'm ye* (1447 Sek 6:38 [¹Yi Tonglim version]) deigned to enter each hostel that Sudatta had built, and ...; *SYWU-TTALQ oy moyng ko'lwon CCWA ay* (1447 Sek 6:30a) to the seat that Sudatta had made; *ZIN-ZYWOK THAY-CO uy il Gwu'syan YAK i-ngi 'ta* (1459 Wel 21:218b) it is a drug, sir, that Prince Kṣānti has concocted. But sometimes the epitheme is extruded from some other role, such as locative *V N ← N ey ('syē)* *V: PA-SO-⁴⁰NIK NGWANG uy sa'non SSYENG* (1464 Kumkang 4b) the castle where Prasenajit

is/was living. Or even a mutative complement *V N ← N* ⁴⁰*lwo V: SSIN-LUK [Juy HWA ho'syan ke's un pas[k] chyenlyang ay nam'ti mwot ho'n i* (1463 Pep 6:144a) what the supernatural power has brought into being is nothing more than external property. And in at least one example, from an accusative: *na y nyey KA-LI uy pe hywo.m i towoy ywom kot ho.ya* (1482 Kum-sam 3:29a; the *uy* translates *ci*) it is like the way I got to cut down (= vanquish) [King] Kali[nga] in bygone days.

There are also summational epithemes, such as nominalizations with the substantive: *KAN-NAN ho'n i uy no'm oy pwo'poy hyey ywom kot 'ta* (1465 Wen 3:3:1:62a) it is like a poor man's counting another's treasures. *kunge kay SSWUW-KHWO hol ssalo'm i KAK-KAK CCWOY oy cyeku'm ye khwu.m u'lwo KEP-SWU lul ti-nayno'n i* (1459 Wel 1:29b) the people who anguish there pass the appropriate number of kalpas (eons) in accordance with their individual sins being small or great. *KA-LI uy e lywu.m o'lwo* (1482 Kum-sam 3:30a; *uy* translates *ci*) with the stupidity of [King] Kali[nga] = because Kali[nga] is stupid.

NOTE: In a few kinds of phrases people are uncertain whether to treat */ey/* as the adnominal particle *uy* or the adverbial particle *ey*. We would expect *chen mān uy māl-ssum (ip.nita)* for '(It is) a word among the myriad [of words]' = 'Not at all; Don't mention it', but the expression is often written as *chen mān ey māl-ssum*, perhaps because of the common relaxed version *chen mān ey yo = chen mān [uy māl-ssum i]ey yo*. The Koreanized version of the Chinese expression *sam-pun ci il* 'one third' we expect to be *sēy pun uy han pun* but 1936 Roth 257 has *sēy pun ey han pun*.

uy, particle; variant *oy*.

1. (after animate noun) = *uy* (genitive). CF *s. tye uy mwok-swu'm ul kus'kuy [= kuch-kuy] hoke tun* (1447 Sek 9:17a) given that they brought his life to an end *KKI-TTA oy twu-ys.non ke.s i'n i* (1447 Sek 6:40a) are things that Jeta put aside. *kwuy-s-ke's uy [JKHWOLQ ey toma* (1482 Kum-sam 3:34b) holes up in the cave of a ghost and SEE *uy* for more examples.

for more examples.

2. (after inanimate noun, typically a place or time) = *ey* (*i ay*) = *ey* at, in (locative); to (allative). *¶ho ma [SYENG-KWAK] s pas k uy na tuthu l ey s i.l i cyekwo m ol anwo n i* ... [= *anwo n i*] (1481 Twusi 7:2a) he already knew that going outside the castle wall there were few problems from dust (and that) ... *YA-SYWU s KWUNG uy ka-pwo n i* (1447 Sek 6: 2b) went to the palace of Yaśodhāra [Buddha's wife]. *ne y a chom uy na-ka* ... (1586 Sohak 4:33a) you go out early and ...

NOTE 1: The MK genitive particle, as an adnominal or as marking the subject of an adnominalized verb, had the variant shapes *uy* and *oy*; about .56 of the examples use *oy*. The vowel of the preceding syllable partly determines the shape preference. After *e(C)* the shape is always *uy* except for *ye.s oy* (1579 Kwikam 1:36a) = *yez G oy* (1462 ¹Nung 8: 120a) 'of the fox' < **yez[o]G oy*, reflecting the elided *o*, which surfaces in *yezo*. After *a(C)* the choice is usually *oy* but there are a few exceptions: *QWUY-NGWANG uy* (1463 Pep se:17a), *TWO-MAN uy* (1463 Pep 7:182a), *PASO-NIK NGWANG uy* (1464 Kumkang 4b), *[HHYEN-SAN] al ph oy* (1481 Twusi 7:4b). After *o(C)* and *wo(C)* the choice is *oy* with at least two exceptions each: *THAY-CO uy* (1459 Wel 21:218b), *CANG-SSO uy* (1485 Kwan 4b); *pwu mwo uy* (?1517- Pak 1:58a), *[PPWULQ-CWO] uy* (1579 Kwikam 1:21a). After *u(C)* and *wu* there are only examples of *uy*: *susu ng uy* (1447 Sek 6:29b), *TI-TUK uy* (1463 Pep 4:169a), *SSIN-LUK [Juy* (1463 Pep 6:144a); *TA-SYWU uy* (1447 Sek 6:9b) *ke pwu.p uy* (1482 Kum-sam 2:66a), *MWULQ uy* (1482 Kum-sam 3:25b). After *uy*, *ey*, *oy*, and *ay* the shape is always *uy*, as in *kutuy uy* (1481 Twusi 15:13a, 1482 Kum-sam 2:67a), *ney uy* (1459 Wel 21:22a, 1463 Pep 1:60a), *YWOK-QOY uy* (1462 ¹Nung 1:42a), and *nay uy* (1481 Twusi 22:27b), with the exception of *nay oy* (1462 ¹Nung 1:45a, 2:19a). But the one example of *woy* is *swoy oy* (1482 Kum-sam 2:29b) and the particle seems to be unattested after *wuy(C)*. After *i(C)* both *uy* and *oy* occur: *CO-SIK uy* (1459 Wel 8:83a), *kyeci p uy* (1463 Pep 4:176b), *al Jpi uy* (1463 Pep 2:138b; but *a pfi oy* in the next line); *i l oy*

(1447 Sek se:5b), *[TUK-CIN] oy* (1481 Twusi 24:30ab). But both *-i uy* and *-i oy* often elide the *i*, as described in Note 2.

As a substitute for the locative or allative *ey*, the variants enjoy the same preferences, but there seem to be no examples of *i(C) oy* and only the one case of *[i] oy* in *pa[l]-ch[i] oy* (1459 Wel 10:10a) but none of *[i] uy*. The exceptions with *a(C) uy* instead of *a(C) oy* are *alp ph uy* [conflated spelling of *al ph uy*] (?1517- Pak 1:25a) 'in front' and *holo n man uy* (?1608+ Twu-hem 21a) 'for a whole day'; with *o(C) uy* instead of *o(C) oy* only *a chom uy* (1586 Sohak 4:33a) for *a cho m oy* (1447 Sek 6:3b) 'in the morning'. The only cases of *wo(C) uy* for *wo(C) oy* are *twos k uy* (1463 Pep 1:168a) 'to their seat mats' and *SA-MWON uy* (1447 Sek 24:22a). There are no exceptional cases of **e(C) oy* or **wu(C) oy*. Regardless of the vowel that precedes it, the noun *psk* 'time' takes only *uy*: *ku psk uy* (1459 Wel 9:52a, 21:5a; 1463 Pep 2:23a, 2:138b) 'at that time', *twu psk uy* (1462 ¹Nung 3:26a) 'on two occasions', *su mu nal psk uy* (?1517- Pak 1:8b) 'on the twentieth day'. And the bound nouns *s* and *t* 'the fact that' take only *oy*: *ulq s oy*, *un t oy*, *non t oy*. We treat *tuy* in *men tuy s HHWO-KYWOW lol* (1459 Wel 2:69a) 'alien teachings from distant places' as a variant of *toy* 'place' rather than *t* (or *to*) 'place' + pcl. Notice also *e n oy* < **e no oy* = *e nu*.

NOTE 2: In Middle Korean (CF LSN 1961: 112, He Wung 320-3) a preceding (*-i*) had weakened to *-y* and then, once the syllables **yuy* and **yoy* were no longer part of the system, it completely vanished: *a ki baby* → *a kfi oy pi t i* (1459 Wel 8:81b) the debt for the baby, *a kfi uy i.p ey susu.m ye n'* (1608 Thaysan 76b) if you rinse in the baby's mouth. *e mi* → *na y e mfi uy kan sta h ol spol li nilo sywo sye* (1459 Wel 21:21b) quickly tell me the land where my mother went. *a pi father* → *a pfi oy chyenlyang* (1447 Sek 13:18b) the father's fortune, *a pfi oy MWON-TTYENG i nwopke nul* (1482 Kum-sam 3:25a) though the father's gateway is high. *ilhfi uy skwo li* (?1517- Pak 1:30b) a fox tail. *kwo ki meat* → *LYWONG on kwo kfi oy TYWUNG ey wuytwu hon ke s i n i* (1459 Wel 1:14ab) dragon is the

best of meats [personified, thus 'oy not s]. *kol'mye k[fi] uy 'nye ton'nywo'm on* (1481 Twusi 14:29b) the wandering of the seagulls. *'thwos.k[fi] uy spul 'kot 'two'ta* (1482 Kum-sam 2:66b) is like a rabbit's horns. The pronoun *'wu'li* did not undergo weakening, according to He Wung 323, and that accounts for *pwu'thye y 'wuli 'uy mozo'm ay 'SYWOW-PEP 'cul'kinon 't ol 'alo'sya* (1463 Pep 2:231a) Buddha is aware that in our hearts we cherish the laws of hīnayāna and ... — CF *'swu'l[fi] uy me'li SAN 'i.n i* (1463 Pep 1:20b) it is the mountain [called] Eagle's Head. The weakening totally ellipted the postmodifier 'i in the structures -'n [fi] *uoy*, -n^u*o'n* [fi] *uoy*, and -(*u*)'l [fi] *uoy*.

The locative *'uoy* and the dative/allative *'uoy k[fun]je* occasion the same weakening: *CYE-'CO y ci'p uy 'na a'p[fi] oy key na'za 'ka* (1463 Pep 2:70b) the masters went out to the house and went up to the father. *'a'ki na'hi'ten 'e'm[fi] uy key un'kwa 'pitan'tol[h] 'syang'kup ho'kwo* (?1517- Pak 1:57a) presented silver and silks to the mother who had born the child. *QANAN 'kwa LA-NGWUN 'un 'pa[l]-'ch[fi] oy 'sye 'y'sopte'n i* (1459 Wel 10:10a) Ānanda and Rāhula were standing at the foot.

When the particle marks the subject of an adnominalized predicate, the final *...i* of the noun often stays intact: *ka'h[fi] oy 'SYENG 'un ... han ka'hi 'uy cwu'kem to'thwa ca'pwo'm ay talo'ti a'ni ho'n i 'la* (1463 Pep 2:113b) the nature of the dog is nothing other than the fighting to death of a horde of dogs. *ku 'psk uy CYE-'CO y api 'uy PPYEN-QAN 'hi ancon 't ol 'al'Gwo 'ta a'p[fi] oy key 'ka a'p[fi] oy key nil[']Gwo'toy* (1463 Pep 2:138b) at that time the masters, finding that the father was seated comfortably, all went to the father and said to the father as follows Therefore we might conclude that *a'p[fi] oy cwu'kwu'm ul tut'kwo* (1463 Pep 5:158a) is better taken as 'hearing of the father's death' rather than 'hearing that the father dies'. But there are also examples that show the weakened version: *'na y 'icey ne 'y 'e'm[fi] uy 'kan 'sta'h ol 'pwoy'yo.l i 'la* (1459 Wel 21:21b) I will now show you the land where your mother went; *'e'mi l' solang 'hwo'toy 'e'm[fi] uy solang hwolq SSI-'CYELQ 'ko'thi ho'm ye n' 'emi 'Gwa 'CO-'SIK 'kwa y*

han SOYNG 'ol selu e'kuy'ye 'me'ti a'ni ho'l i 'n i (1462 ¹Nung 5:85b) if it is the same when [the child] loves the mother and the mother loves [the child], mother and child will not be estranged by conflict throughout many lives together.

The weakening and vanishing of *...i* before the adnominal particle explains examples of *...n uoy* and *...l uoy*, for they are sentences adnominalized to the postmodifier 'i 'one (the person) who ...': *'PPYENG ho'n [fi] oy nek's i kwo't ay two'la 'wa* (1447 Sek 9:31b) the spirit of the ill one came back on the spot (= at once). *HHOYNG ho'l [fi] oy 'PPYEN-NGUY* (1463/4 Yeng 2:31a) the comfort of the traveler.

Examples of the modern usage whereby *uy* is attached to the unweakened *...i*, just like any other vowel, began appearing in the early part of the 16th century (He Wung 322): [*'NGE 'PPOYK-ZI*] *kwo[']jki uy ilwu* ([1517→]1614 Saseng 2:59b) 'the milt of fish'.

y-, abbr < i- (cop) after a vowel. After i or y written ' (= 'y/)-). NOTE: It is unclear just when the preconsonantal abbreviation of the copula stem after vowels other than i came to suppress its palatal glide: we are not sure when *'na 'y'la* (1459 Wel se:4b) became *na 'la* '(says) it's me'. The full stem is still heard in explicit speech and especially for the short forms in, ilq, im, but the 'y version persists only in a few expressions such as ... key 'ta (< ke[s] ita) = ... ke 'ta and ...nun pay 'ta (< -n^uon pa 'y...) = -nun pa 'ta. Notice also dialect forms such as nayntul for na 'n tul 'though be me'. The shortening must have taken place before 1730, for otherwise the form *ho.ye 'la* found in [TTYWEN] *hol twong mal twong ho.ye 'la* (1730 Chengkwu 104; cited from LCT) 'it is barely conveyed' should be *ho.ye 'yla*. NOTE 1: The meaning of this focus particle is mutually exclusive with that of **un/nun** (as for) and usually that of **to** (also/even), but see the note on **to** for possible cases of **un/nun iya** and **to ya**. The particle freely follows other particles and sequences, but **i/ka** (nominative) and **ul/lul** (accusative) are usually omitted. Yet in Middle Korean *ʔ(l)ul / (l)ol ʔa* occurs, and most examples of *ʔi ʔa* and of its reduction *y ʔa* represent the nominative *pcl ʔi + ʔa*. SEE -ta ka ya.

NOTE 2: The particle **ya** is not very common in the modern language, except for structures such as **-e ya** (*hanta*, ...). A study by Andrew Dillon of about 40,000 syllables of fiction in a monthly magazine turned up only 32 examples and of those only ten followed a noun or particle. But **MK ʔa** is quite common in many early texts.

YU for Middle Korean is here written ywu even though then as now there was no *yu. In the Yale Romanization as we adapt it for Middle Korean, the high back rounded vowel is always written wu, though for modern Korean we omit the "w" after p ph pp m y. Similarly, the mid

back rounded vowel of earlier Korean is always written wo, even after y.

*/yu/. Hankul symbols were invented to write both /yu/ and /yol/; though these did not exist in 1445 Seoul speech, they were said to be found in dialects. From forms in modern dialects it is possible to reconstruct several words that must have had *yo in pre-Hankul Korean (LKM 1978, 1979), but no evidence has been found to encourage reconstructing *yu. One dialect of Kanglung distinguishes a syllable yu: (with long unrounded high central vowel) from ye: (with long unrounded mid central vowel), according to 'Yi Iksep 1972, who cites yu:l 'gallbladder', yu:pwu 'yes or no', yu:ngkam 'an elderly gentleman', and yu:n hata 'is soft' as opposed to ye:n 'kite' and ye:n kkwoch 'lotus blossom'. Since etymologically these should all be /ye/, it is unclear how the differentiation came about.

In general, strings like -zowo- are treated as being modulated (= -zoWwo-), while strings like -zoWo- are treated as unmodulated. But for those endings that do not permit the modulator to intrude, strings like -zowo- are equivalent to the unmodulated -zoWo-. The relevant cases are - 'zowo'm ye = - 'zoWo'm ye, - 'zowo'm ye n' = - 'zoWo'm ye n', and the infinitive - 'zo'wa = - 'zo'Wa. Before the honorific -(^u)si- and the modulated honorific -(^u)sya- strings like -zowo- are also equivalent to -zoWo-. There is only one modulation in - 'zo'wosya'm ol.

INDEX

This is primarily an index to Part I, but included are Part II references to entries taken from the earlier pages. In seeking information on a subject or form not entered below, the reader should consult the alphabetical list in Part II, which contains many Middle Korean words, as well as more detailed information on the modern forms.

Note: English plural references are often listed with the singular: “stem” = “stem” or “stems”, “verb” = “verb” or “verbs”. References to centuries are regularized to numerical notation: for “fifteenth century” see “15th century”. For the most part, verbs are entered in the stem shape.
